

Gulf of Mexico Oil Spill Response Update 06/21/2010 – 9:00 PM EDT

BP is working as part of the Unified Command to accomplish three main objectives in the Gulf of Mexico:

1. Offshore - to stop the flow of oil on the sea floor;
2. Offshore – to minimize impacts of the spill on the surface; and
3. Onshore to protect and cleanup the shoreline, inform the public, and compensate impacted people.

Highlights

- 14,574 barrels of oil captured by the LMRP Cap on June 20.
- Q4000 drilling platform connected to valves on blowout preventer captured and flared 8,716 barrels of oil on June 20.
- Over \$111 million in claims paid as of June 21 – see State Summaries.
- Relief wells have drilled to 15,936 feet and 10,000 feet below sea level.

Offshore – Sea Floor

BP's priority is to contain the oil spill and complete relief wells to kill the flow.

Containment Recovery

- Lower Marine Riser Package (LMRP) Cap – 14,574 barrels of oil were captured through the LMRP cap during the past 24-hour. Total recovery from the LMRP Cap is 253,444 barrels to date. Oil and natural gas are being carried to the surface through a riser pipe and oil is being stored on the *Discoverer Enterprise*. The gas is being flared: 32.5 million cubic feet were burned on June 20.
- Q4000 Direct Connect to Blowout Preventer – This containment system, which is connected directly to the BOP and carries oil and gas through a manifold and hoses to the Q4000 vessel, flared 8,716 barrels of oil and 15.8 million cubic feet of gas on June 20. Because the Q4000 does not have storage capacity, it uses a specialized clean-burning system to flare captured oil and gas.
- Permanent Riser Systems – BP is bringing in two additional ships that will be connected to “permanent riser systems.” These systems will be capable of quick disconnect/reconnect in the event of a hurricane. The first riser has been fabricated and is being installed. The second riser is in the design stage. More information can be found under “Technical Update” on BP’s website at:

Dispersant injection on the sea floor – dispersant use at the subsea leak source continues, with approximately 13,695 gallons applied on June 20.

Drilling Relief Wells

Drilling continues on both wells. They are situated approximately one-half mile from the Macondo well and will attempt to intercept the existing wellbore at approximately 18,000 feet below sea level. Once intercepted, the Macondo well can be killed via a “bottom kill” by pumping heavy mud and cement into the wellbore. It is estimated the total drilling process for each well will take at least 90 days from the start date.

- The first relief well (work being performed by the *Development Driller III*) is at approximately 16,000 feet below sea level. This well was “spudded” on May 2.
- The second relief well (work being performed by *Development Driller II*) is at approximately 10,000 feet below sea level. Drilling began on May 16.

Offshore – Surface Response

Skimming Vessels – Over 400 skimmers designed to separate oil from water are deployed across the Gulf. Over 571,000 barrels of oil-water mix have been recovered and treated.

Surface Dispersant – 19,576 gallons of dispersant were applied on the surface yesterday.

In-Situ Burning – 5 burns were conducted in the last 24-hour period. More than 150,000 total barrels are estimated to have been consumed through burns.

BP Environmental Monitoring Program – As part of the response effort, several ongoing sampling and monitoring programs have been implemented based on the type of impact or location and trajectory of the spill. Monitoring and sampling programs are being conducted for:

- air quality
- water quality
- water column sampling
- submerged oil, and
- worker health.

Sampling data can be found at:

<http://www.bp.com/sectiongenericarticle.do?categoryId=9033821&contentId=7062498#>

Interactive Mapping Websites – BP has developed an Interactive Mapping Tool meant to provide a one-stop shop for detailed near-real-time information about the response to the Deepwater Horizon BP oil spill. The tool integrates the latest data on the oil spill’s trajectory, fishery closed areas, wildlife and place-based Gulf Coast resources, locations of oiled shoreline and other data points. The BP mapping tool is located at:

<http://www.gulfofmexicoresponsemap.com>. The U.S. Government has also created a mapping tool that is located at: www.GeoPlatform.gov/gulfresponse.

Spill Response Technology and Offers of Services or Products –

- BP is receiving approximately 5,000 suggestions per day on innovative ways to stop the flow of oil or contain the oil spill. Our team of engineers is reviewing these as quickly as possible. To submit alternative response technology, or offer services or products, call (281) 366-5511, or go online at: www.horizedocs.com. After forms are received they

are reviewed by a team of technical and operational personnel who assess need, technical feasibility and application.

- The U.S. Government has also issued a general call for submission of white papers that cover: oil sensing improvements to response and detection; oil wellhead control and submerged oil response; traditional oil spill response technologies; alternative oil spill response technologies; and oil spill damage assessment and restoration. That announcement can be found online at:
https://www.fbo.gov/index?s=opportunity&mode=form&id=6b61794cf96642c8b03fcf9e0c3083eb&tab=core&_cview=1

Onshore – Shoreline Protection and Funding

Boom Update – Nearly 2.7 million feet of containment boom are deployed or assigned across the Gulf with 768,000 feet in staging areas. More than 4 million feet of sorbent boom is deployed with 2 million feet in staging areas.

Volunteers and Training – Volunteers are being trained in five different modules that range from safety for beach clean-up, to wildlife monitoring, handling of hazardous materials and vessel operation for laying boom. Information about training can be found at www.deepwaterhorizonresponse.com under “volunteers.”

Onshore – Claims

More than \$111 million in claims paid - BP has paid \$111.2 million to residents along the Gulf Coast for claims filed as a result of the oil spill in the Gulf of Mexico. BP has issued more than 34,400 checks in the past seven weeks in response to about 66,800 claims to date. A 1,000-member claim team is working around the clock to receive and process claims. There are 33 field offices set up in the States of Louisiana, Mississippi, Alabama and Florida, and BP is accepting calls through an 800 number as well as accepting applications online. The average time from filing a claim to checks being issued is 4 days for individuals and seven days for more complex business claims that have provided supporting documentation. BP's commitment is to move expeditiously and fairly to meet the needs of the residents of the Gulf Coast.

Filing Claims – The contact number for claims is (800) 440-0858. In person claims can be filed at office locations listed below. Claims can also be filed online at: www.bp.com/claims. *Note: No person asserting a claim or receiving payment for interim benefits will be asked or required to sign a release or waive any rights to assert additional claims, to file an individual legal action, or to participate in other legal actions associated with the Deepwater Horizon incident.*
