Gulf of Mexico Incident - Daily Dashboard -Period: 8/29/10 6AM – 8/30/10 6AM

Produced BP's Washington, DC Office Sources: BP and National Incident Command

Highlights:

- Weather standby for all operations.
- Fishing operations to recover broken drill pipe in Macondo BOP unsuccessful.
- Unified Command has approved removal of the Capping Stack and failed BOP.
- Boom recovery suspended due to weather.

BP Gulf of Mexico Incident Daily Update – August 30, 2010 Produced by BP's Washington, DC Office Sources: BP and National Incident Command

Topline

Removal of BOP and Capping Stack – Operations at the site are currently suspended due to weather.

The "fishing" operation to remove the broken drill pipe from inside the failed blowout preventer has been unsuccessful, and the Unified Command has now approved plans to proceed with removal of the Capping Stack and BOP, pending weather. Once all the equipment has been cleared away from the Macondo wellhead, the *Development Driller II* will place a new BOP onto the well and proceed with the relief well.

BP is complying with government directives concerning all recovery of equipment from the Macondo well. We are following Admiral Allen's instruction to bring equipment it to the surface. The U.S. Government will then preserve it at a facility in New Orleans specified by the Marine Board of Investigation. Additionally, we are preparing responses to a recent request from the Department of the Interior that BP and other parties provide input into the types of inspection, testing and analysis that government agencies or others might conduct on the BOP.

Relief Wells – The *Development Driller III* remains on standby and the first relief well is approximately 50 feet from the intercept point with the Macondo wellbore. Once the new BOP is on the Macondo wellhead, the *DDIII* will proceed with drilling and ranging operations in the first relief well. The new BOP on the Macondo wellhead will provide a more robust system to contain any pressure put into the Macondo well during intercept and a bottom kill operation.

Claims Transition – BP has transitioneded its individual and business claims program to the Gulf Coast Claims Facility (GCCF). Their comprehensive website is located at: <u>www.gulfcoastclaimsfacility.com</u>.

Government Claims – BP's claims team will continue to handle *government* claims and funding requests. On Thursday, BP announced several steps it has taken to enhance communications for government claims including:

- Sending letters to those who have made requests and entities for whom BP anticipates receiving requests that explain how to file claims
- Dedicated a website to government claims
- Established an email list to provide details and updates. To join the list either register at <u>www.bp.com/governmentclaims</u>, or send an email to <u>governmentclaimsinfo@bp.com</u> after August 27, 2010.
- Retained *James Witt and Associates* to assist in outreach to state and local governments. *Witt* representatives will provide advice to government entities about needed documentation, will answer questions, and provide feedback from claimants to BP regarding the claims process.

The contact information for filing government claims with BP is:

- Online at <u>www.bp.com/governmentclaims</u>
- Email at <u>governmentclaims@worleyco.com</u>

- Mail to:Government Entity Claims and Funding Requests
 1905 W. Thomas Street
 - Suite D-358 Hammond, LA 70401
- Phone 1-877-710-4064
- Fax 1-800-810-5650

New Water Quality Monitoring Capability – BP has deployed new technology to enable nearly constant water monitoring in the Gulf of Mexico. The technology consists of two satellite-controlled, unmanned vehicles known as Wave Gliders, and developed by Liquid Robotics in Silicon Valley, California. They get their propulsion power from wave action and use solar power for their electronics. They will be deployed for a months-long, ongoing research program in the Gulf of Mexico. The unique technology provides persistent sensors, for the long term, to monitor key environmental variables, including:

- water quality detection of any emulsified, dissolved and dispersed oil in water; phytoplankton (chlorophyll); colored, dissolved oxygen matter (CDOM) and other scientifically useful variables
- marine mammal vocalizations
- weather and water temperature data.

State Summaries – Shoreline Operations

LOUISIANA

SHORELINE: Preparations for weather. **BOOM**: 1,776,503 feet of boom remains deployed.

MISSISSIPPI

SHORELINE: Preparations for weather. **BOOM**: 27,950 feet of boom remains deployed.

ALABAMA

SHORELINE: Preparations for weather. **BOOM**: Final boom recovery has been completed in Alabama.

FLORIDA

SHORELINE: Preparations for weather. **BOOM**: Final boom recovery has been completed in Florida.
