

Project: Law Enforcement Biometric Technology Insertion

Amount requested: \$500,000

Recipient: Franklin County Sheriff's Department

Address: 420 Wilton Circle, Winchester, TN 37398

Project description:

The funds will be used to deliver a comprehensive system that encompasses 911 call initiations through incarceration and inmate release from facilities. The enhanced applications will include modules for Computer Aided Dispatch, Incident Tracking, Evidence Tracking, Crime Scene Layout, Arrest Management, Court Management, or other items tracked and managed by municipal, county, and state law enforcement agencies. These modules will be built leveraging our software development expertise gained through INTACT and Department of Defense programs. Our metrics for success are: completion of technical objectives within budget; implementation completion and delivery within the law enforcement agency's scheduled timeline and successful exchange of information across agencies.

This project improves information access for law enforcement activities and processes. Additionally, this effort will serve to minimize nonproductive man-hours expenditure on redundant data capturing and entry. Sharing of accurate information across agencies will reduce time spent on investigations, research, and suspect tracking.
