Dear Sir:

This letter is to formally report a bypass discovered on 8 June 1987 in the Hadnot Point Wastewater Treatment System, Marine Corps Base, Camp Lejeune, North Carolina. Telephonic notification was made to your office on 8 June 1987. Utilities Branch personnel, responding to a service call, found wastewater overflowing from a manhole in the Hadnot Point area at approximately 9:00 am. It was determined that the sewage main was clogged so it was subsequently opened and the bypassing ceased. Some wastewater had reached a storm drain that empties into New River, however, there was no visible evidence the wastewater reached the New River. The storm drain was dry a few feet from the River. Samples were taken from the storm drain and near the mouth of the storm drain in the river for Dissolved Oxygen, Biochemical Oxygen Demand, and Fecal Coliform. The fecal coliform plates from both points were too numerous to count. The dissolved oxygen was 3.7 mg/l in the storm drain and 7.9 mg/l in the river. The BOD was 0.3 mg/l in the storm drain and 2.0 mg/l in the river.

If additional information is desired, please contact Ms. Elizabeth Betz, Supervisory Chemist at (919) 451-5977.

Sincerely,

J. I. WOOTEN
Director, Natural Resources Division
By direction of the Commanding General
