- A. CG MCB CLNC 181657Z NOV 85
- 1. THIS MSG UPDATES THE SPILL REPORT PROVIDED BY THE REF. A CRIMI-NAL INVESTIGATION HAS BEEN CONDUCTED. BASED ON THE INVESTIGATION, THE FOLLOWING IS PROVIDED.
- 2. THE SPILL DID NOT EXCEED 175 GALLONS.
- 3. THE INVESTIGATION DETERMINED THAT THE SPILL WAS CAUSED BY THE MALFUNCTION OF AN ATMOSPHERICALLY CONTROLLED VALVE WHICH OPERATES THE AUTOMATIC WATER DRAIN ON THE M=70 TANKER.
- 4. THE FUEL SPILL WAS DETERMINED TO HAVE BEEN ACCIDENTIAL IN NATURE AND NO FURTHER INVESTIGATIVE EFFORTS ARE CONTEMPLATED AT THIS TIME.

PRESENT A SERIOUS THREAT TO PERS SAFETY AND MAY RESULT IN DAMAGE TO FACILITIES AND EQUIPMENT. EXCESSIVE QUANTITIES OF POL'S ENTERING THE SANITARY SEVER CAN DISRUPT THE EFFECTIVE TREATMENT OF SEVAGE AND CAUSE ADDITIONAL ENVIRONMENTAL VIOLATIONS.

- 2. COMMANDING OFFICERS/AREA COMMANDERS ARE RESPONSIBLE FOR ESTABLISHING PLANS AND PROCEDURES TO PREVENT SPILLAGE AND OTHER UNAUTHORIZED DISCHARGE OF OIL/HAZARDOUS MATERIAL WITHIN THEIR AREAS. THOSE UNITS HAVING REFUEL/DEFUEL CAPABILITIES MUST PAY PARTICULAR ATTENTION TO THIS ISSUE. M-49 OR M970 VEHICLES STORE TREMENDOUS QUANTITIES OF FUEL AND HAVE THE POTENTIAL FOR SERIOUS ECOLOGICAL DAMAGE. THEY MUST BE SECURED WHEN UNATTENDED AND INCLUDED IN A REGULAR MONITORING PROGRAM BY GUARD OR DISPATCHER PERSONNEL. CATCH BASINS MUST BE USED AND FAULTY VALVES MUST BE GIVEN THE HIGHEST PRIORITY FOR REPAIR. UNITS WITH A MAINTENANCE ROLE HAVE: A SIMILAR-RESPONSIBILITY TO ENSURE REPAIR OF PETROLEUM CONTAINERS CFUEL TANKS) ARE ACCOMPLISHED WITH CARE AND AWARENESS OF THE POSSIBILITY FOR ENVIRONMENTAL DAMAGE.
- THE REFERENCES PROVIDE COMPREHENSIVE GUIDELINES FOR PREVENTING A SPILL AS WELL AS CLEANUP AND REPORTING PROCEDURES WHEN A SPILL OCCURS. IT IS INCUMBENT UPON ALL MEMBERS OF THIS COMMAND TO BE AWARE OF THE SERIOUS CONSEQUENCES THAT POLLUTION CAN CAUSE AND TO ENSURE THAT WE MINIMIZE THE DAMAGING IMPACTS ON OUR ENVIRONMENT.

OFFICE OF THE PROVOST MARSHAL Marine Corps Air Station New River, Jacksonville North Carolina, 28545-5000 5560.2 PMO 3 Sept 85 From: Traffic Investigation's Officer To: Commanding Officer, Marine Corps Air Station, New River, Jacksonville, North Carolina 28545 Subj: INVESTIGATION TO INQUIRE INTO THE CIRCUMSTANCES SURROUNDING THE MOTOR VEHICLE ACCIDENT WHICH OCCURRED ON OR ABOUT 0540, 19 JUNE 1985, ON CURTIS ROAD, BETWEEN "A" STREET AND DELALIO ELEMENTARY SCHOOL (a) Motor Vehicle Traffic Laws of North Carolina Ref: (1) MCAS(H), NR 258/36 (NEW 3-84), Traffic Accident Report (2) Diagram of Accident Scene (3) Photographs Depicting Approach to Accident Scene and Accident Scene (4) Photographs Depicting Identification of Vehicle #1 (5) Photographs Depicting Damage of Vehicle #1 (6) Statement of Mr. BOYETTE (7) Estimate of Damage of Vehicle #1 (8) Estimate of Safety Measures to Accident Scene (9) Receipt for Cargo of Trailer of Vehicle #1 Preliminary Statement 1. An investigation was conducted into the subject accident by Sergeant Mary F. BRASWELL, Traffic Investigator, Provost Marshal's Office, Marine Corps Air Station, New River. Initial investigation revealed that the accident occurred at 0540, 19 June 1985, in the southside ditch of Curtis Road, approximately 100 feet east of "A" Street, involving a 1979 MACK Tractor cab, North Carolina registration ZB 4989, and Camp Lejeune, North Carolina civilian decal, RRF 902, that was pulling a 1969 Fruehauf gasoline tanker, North Carolina registration, H84598, hereinafter referred to as vehicle #1, which was operated by Mr. Carl Benjamin BOYETTE, 242 32 2528, Post Office Box 54, Pollocksville, North Carolina, employed by Carolina Haulers, Post Office Box 340, New Bern, North Carolina. Findings of Fact 1. That vehicle #1 was owned by Carolina Haulers and operated by Mr. BOYETTE, at the time of the accident and that he possessed a valid state drivers license, issued by the state of North Carolina, #28573. That the character of the roadway was level blacktop, not under construction or repair and that it was dawn, with overcast skies. 3. That vehicle #1 was travelling east on Curtis Road, when the operator failed to make the proper lane change, in order to continue travelling east on Curtis Road. As a result, the operator of vehicle #1 travelled east across the intersection of "A" Street and ran off the roadway. Vehicle #1 came to rest on its' right side, in the southside ditch of Curtis Road, approximately 100 feet east of "A" Street. That vehicle #1 was transporting 6,802 gallons of gasoline and that due to faulty seals, was leaking large quantities of gasoline after turning on its' side. That vehicle #1 leaked 4,208 gallons of fuel into the ditch. Enel. (1)

- Subj: INVESTIGATION TO INQUIRE INTO CIRCUMSTANCES SURROUNDING THE MOTOR VEHICLE ACCIDENT WHICH OCCURRED ON OR ABOUT 0540, 19 JUNE 1985, ON CURTIS ROAD BETWEEN "A" STREET AND DELALIO ELEMENTARY SCHOOL
- 4. That there were minor injuries reported in this accident as substantiated by enclosure (1).
- 5. That there were no witnesses to this accident as substantiated by enclosure (1).
- 6. That the damage to vehicle #1 is substantiated by enclosures(1, 5, and 7).
- 7. That the damage and emergency safety measures taken is substantiated by enclosures (1 and 8)
- 8. That there was no evidence of alcohol or drugs in this accident.
- 9. That Mr. BOYETTE was issued a traffic citation for Inattention to Driving by Gunnery Sergeant Andres E. PAPERMAN, the Staff Non-Commissioned Officer in Charge of the Accident Investigation Division, Marine Corps Air Station, New River.

Opinion

1. That the primary factor in this accident was Mr. BOYETTES' failure to change lanes prior to crossing the intersection.

Recommendations

1. There are no recommendations.

treated and released for a minor laceration to the right leg.

The MCAS New River Fire Departmentwas notified and responded. The operator of VEH 1 was transported to Onslow Memorial Hospital by MCAS New River Ambulance where he was

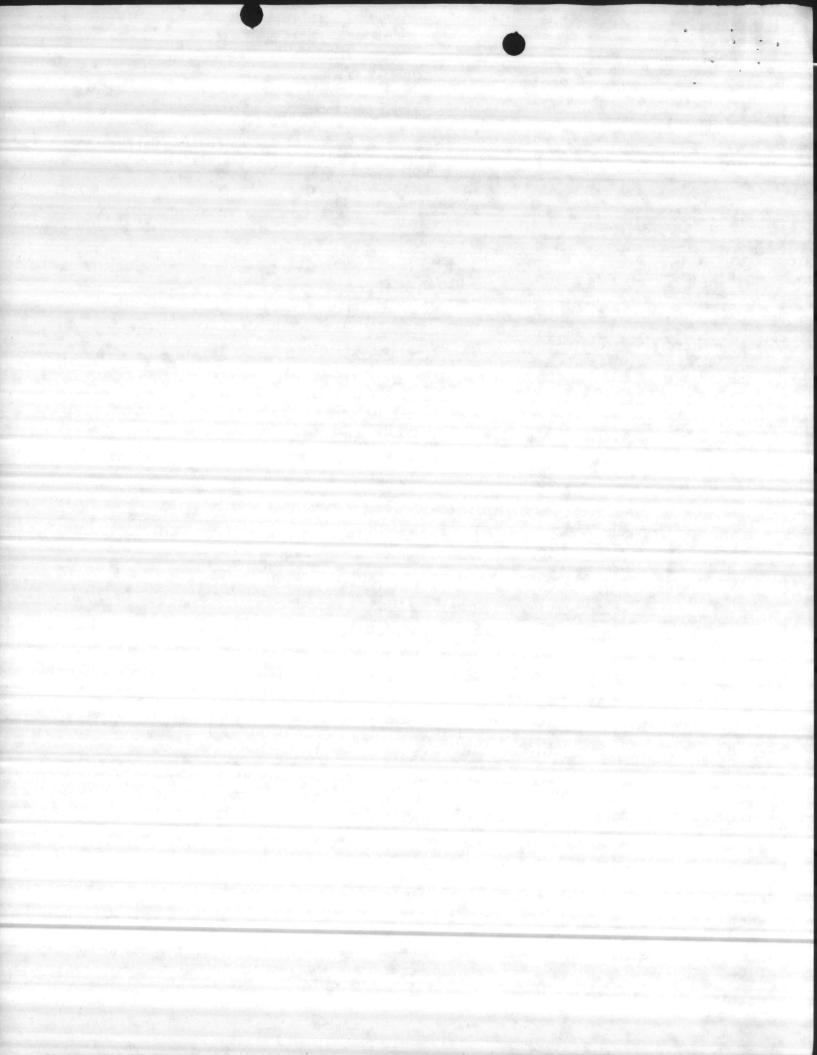

Wireself & July

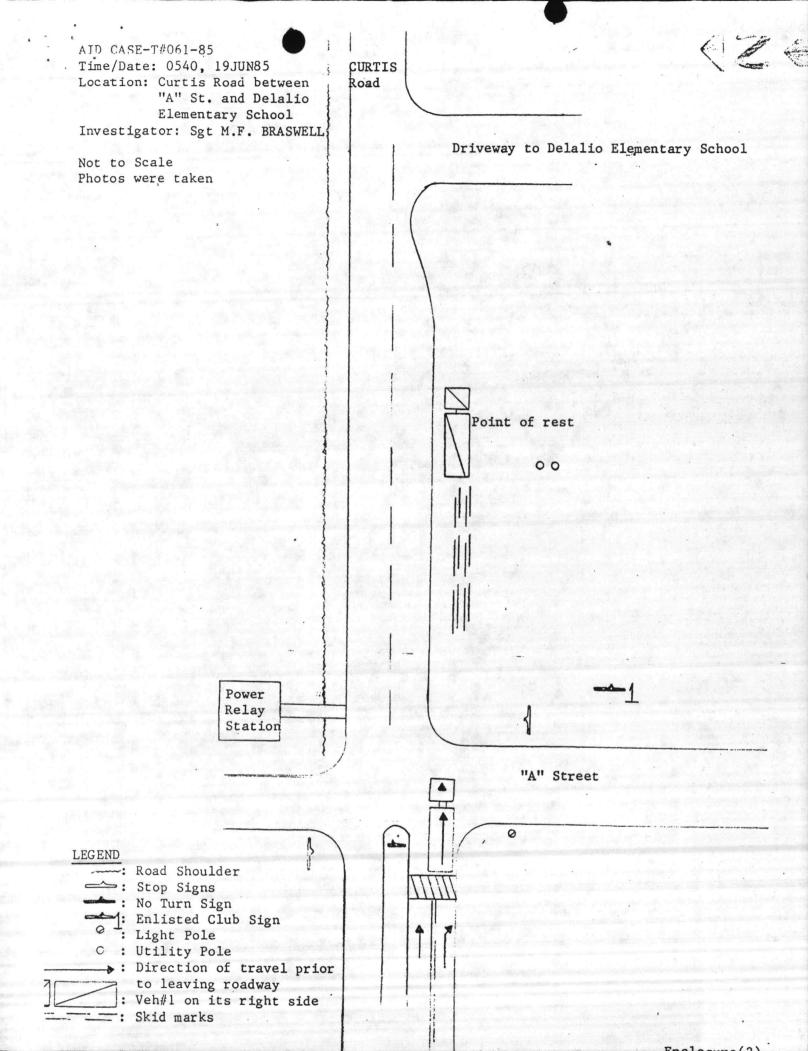

VEH 1 was transporting

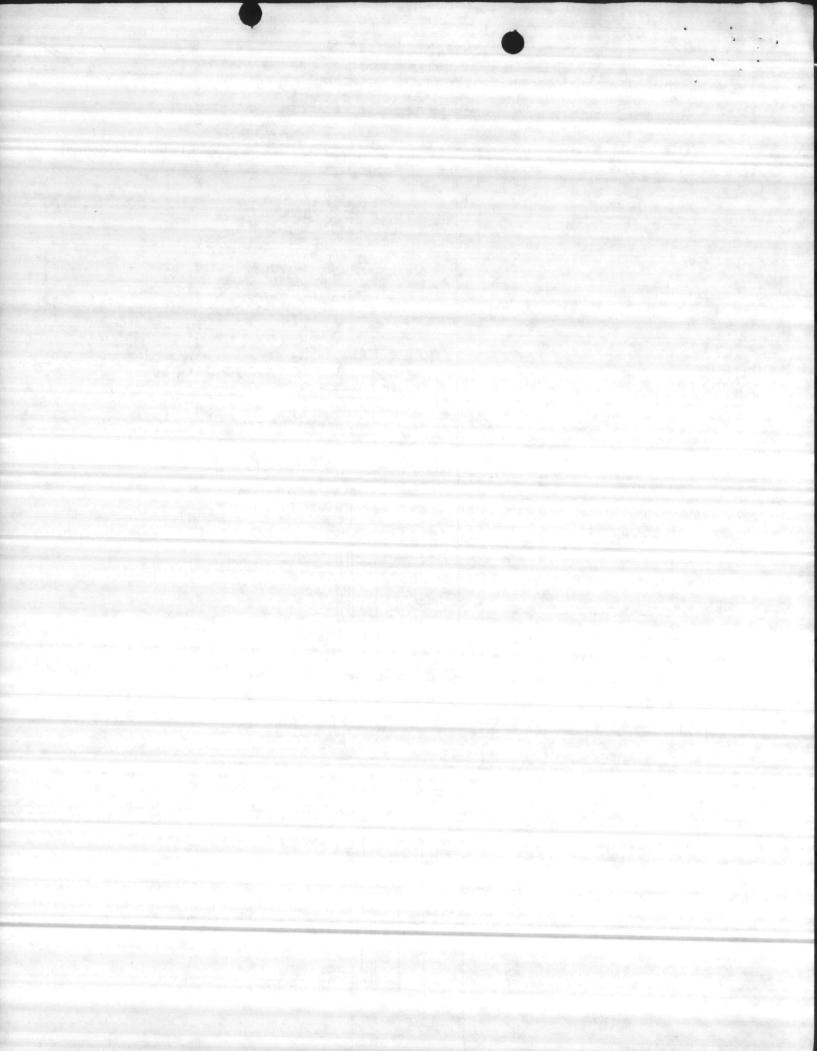

SITUATION OF TRAFFIC ACCIDENT #T-061-85 continued

6802 gallons of gasoline to the MCX Gas Station and due to faulty, deteriorated seals and defueling the tanker it spilled approximately 4208 gallons of gasoline into the ditch.

REMARKS: You will note on the evaluation sheet for the tanker that the estimated cost of repairs was \$13,067.68 and the estimated pre loss value is \$13,470.00. This is as per 5 dealer quote average less depreciable items, clean and prep for resale. There was one salvage bid obtained from Mr. Marion Barnes, who is Fruehauf trailer sales representative at Tom Bailey Motors in Rocky Mount.

You will note on the evaluation sheet for the tractor that the estimated cost of repairs was \$19,887.63 less suggested betterment on the approximately \$9,000.00 engine repair, which was \$1,620.00 betterment, which left an estimated amount of loss on repairs of \$18,267.63. The evaluation was as per 5 dealer quotes average of \$24,300.00 less \$200.00 for tires for an estimated pre loss value of \$24,100.00. Three salvage bids were obtained. One is the attached written bid from Tom Baily Motors for \$5,000.00 and one from Redwine's Salvage, Gaston, North Carolina, for \$4,750.00 and one from East Carolina Trucks for \$3,000.00. The high bid of \$5,000.00 is a little better than 20% of the estimated pre loss value, which would be a fairly reasonable bid, since the engine in this vehicle has blown. You will note in Photo #10 the blown turbo, #11 and #12 the #2 or second from front main bearing cap half and block half. All the bearings in this engine, rod bearings and main bearings, were scored and blued. The crank shaft also was scarred heavily. Plus, with the engine running on the side, there would be damage to the air compressor and fuel injection pump, since

Re: Insured - Carolina Oil & Distributing

these two items also are run from the engine oil and with the blown turbo, that would have floated a lot of additional metal around in the engine.

In reference to the salvage bid on the tank, this writer feels it is a little low. The insured did indicate to me he might be interested in retaining salvage on the tanker; however, I did not discuss any salvage amounts with him.

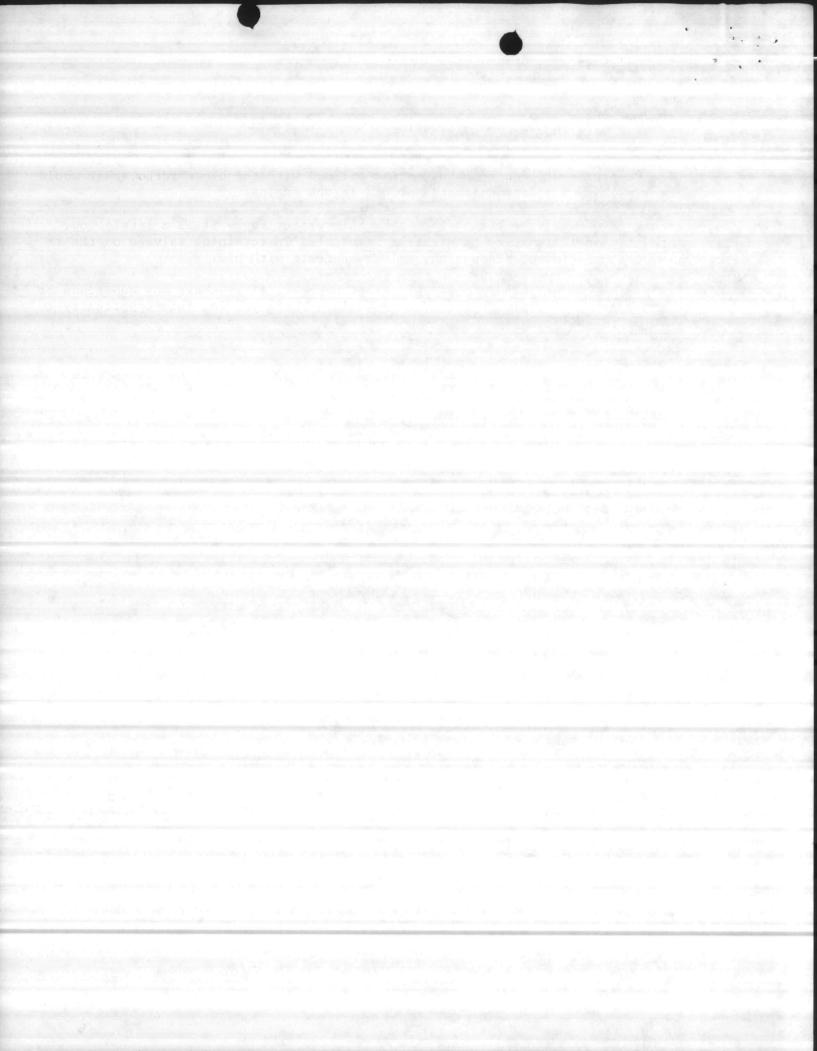

This should conclude our handling of this file; however, if you have any questions or need further assistance, please feel free to call. Thank you for this opportunity to be of service to your company.

Sincerely,

JAMES C. GREENE COMPANY

EVALUATION SHEET

Company: Fireman's Fund Insurance Companies

Claim No: 137487394

Insured: Carolina Oil & Distributing

Policy: MXP 5691907 D/Loss 6/19/85

Rear end & suspension - Mack

Vehicle - 1979 Mack Conventional Cab Tractor Serial No. - 9T31872 Model No. - R686T Engine - Mack 300 Transmission - Mack 5 speed

Estimated Cost of Repairs - \$19,887.63
Less suggested betterment on engine - 1,620.00
Total \$18,267.63

Suggested Betterment: Engine Approximately \$9,000.00 Deduct 20% = \$1,620.00

This vehicle should be considered a constructive total loss, due to extent of damage and possibility of hidden damage. Vehicle ran while laying on its side and in gear. There could be damage to transmission and rear ends, since oil and grease would not have been going to bearings in these parts.

Book Value: National Blue Book for Trucks - April to June 1985

Encl: (1) GrdStructuresGenFrmn ltr MAIN/LDS/cas 5000 of 24 Feb 1983

- 1. The enclosure has been reviewed per Deputy Base Maintenance Officer's request of 7 March 1983. The equipment and supplies shown in the enclosure appear to be adequate for initial response to spills of a size and location for which Marine Corps Base has capability to handle. The items listed in the enclosure are not adequate for containing a significant spill on the ocean, in the Intracoastal Waterway or in the main body of New River. It should be noted that should a spill occur in these larger water bodies, use of a commercial contract is likely to be required. If this were to occur, the sosts would be recoverable from the parties causing the spill and could be very expensive.
- 2. It is recommended that financial and purchasing authorizations are established so as to allow the Director, Maintenance and Repair Branch, to replenish stocks of absorbents from suppliers in the region without delay. It is also recommended that supervisors of the shops having custody of the gear described in the enclosure be made fully aware of the importance of making the gear available to the Ground Structures Foreman upon request. Specific procedures for the ship-to-shore fuel transfer during Solid Shield 83 will be discussed later.

- 1. The below listed items are offered in support of oil spill cleanup capability located at various shops within Base Maintenance.
- a. One each 400 gallon trailer mounted tank with diaphragm pump, 40 gallons per minute with suction and discharge hose, located at the Plumbing Shop.
- b. Waste oil truck USMC #259168, 2,000 gallon capacity with viking pump, 80 gallons per minute with suction and discharge hose located at Heavy Equipment.
- c. Waste oil truck USMC #274378, 2,000 gallon capacity with viking pump, approximately 80 gallons per minute with suction and discharge hose located at Heavy Equipment.
- d. Waste oil truck USMC #254677, 800 gallon capacity with viking pump, approximately 80 gallons per minute with suction and discharge hose, located at Heavy Equipment.
- e. Septic tank truck, 2,000 gallon capacity with vacuum pump, 85 gallons per minute with suction and discharge hose, located at Plumbing Shop, Base Maintenance.
- f. Skimmer unit floatation without storage tank, gasoline pump, PA #213593, 60 gallons per minute with 4" discharge hose.
- g. Skimmer unit boom floatation without storage diesel engine with 2" suction and discharge hose, located at Building #1114.
- h. Sectional aluminum oil boom, nine sections, 50 ft. each, 450 ft. Located at Building flll4.
- i. Collapsable bags for fluid filling and collecting oil, 250 gallon capacity; it can be obtained from Building #914, 2nd FSSG Bulk Fuel, contact Chief of Staff, telephone #2702.
- j. Air driven, hazardous waste pump, Service #F3215, four gallons per minute, located at Building #1114.

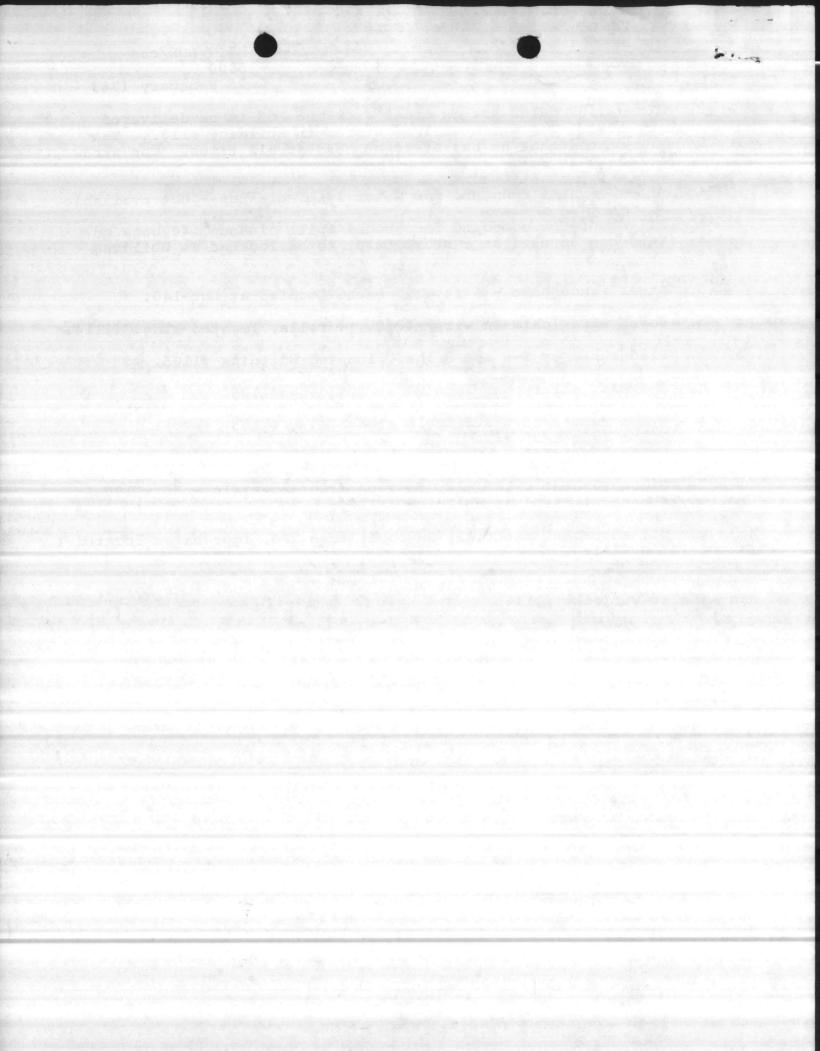

- k. Straw, 100 bales are on order from the FCX to be delivered 25 February 1983. The straw will be stored in Building #1102. The FCX manager stated that he has straw on hand at all times. The straw can be picked up at FCX.
 - 1. Oil absorbent compound for water spill cleanup not available.
- m. Oil absorbent compound for ground spill cleanup, 40 bags on order. Sand can be used as a substitute, to be located at Building
 - n. Steel fence post 6 ft., 50 each, located at Lot 140.
 - o. Woven wire (chicken wire) 4 ft., 4 rolls, located Bldg. #1114.
 - p. Sledge hammer 5-6 and 8 lbs., located Building #1105.
 - q. Shovels, all types, located at Building #1105.

J 18 4

- r. Nylon rope 3/8" available at Building #1105
 Nylon rope 1/2" on order
 Nylon rope 3/4" on order
- s. Oil absorbent materials, 3M type, 100 materials 26 x 100 rolls, 15 each, located at Building \$1114.
- t. Oil absorbent material, 3M boom, type 270, four bales located at Building #1114.
- vu. 3M viscous oil absorbent pads, 25 pads per box, four boxes, located at Building #1114.

7-6280/4

UNITED STATES MARINE CORPS Marine Corps Base Camp Lejeune, North Carolina 28542

FAC/DDS/jc 6280 24 APR 1984

MEMORANDUM

From: Assistant Chief of Staff, Facilities
To: Director, Fire Protection Division

Director, Natural Resources and Environmental Affairs

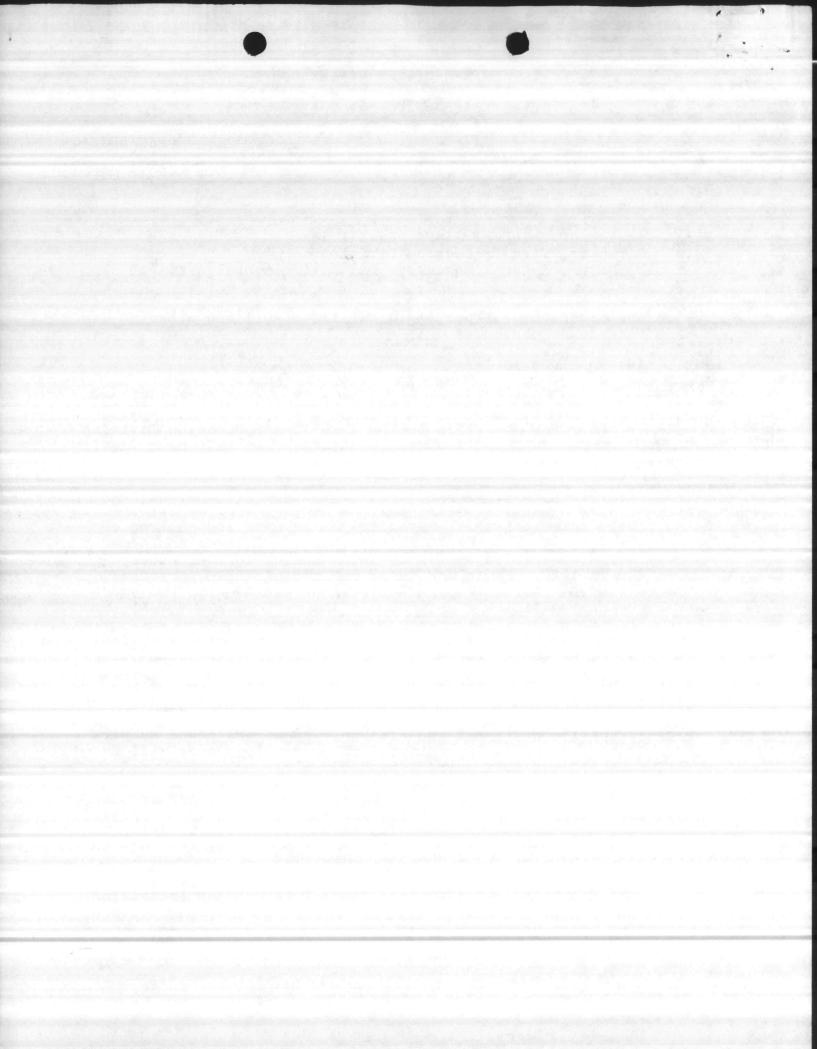

Division

Subj: Notification of Reporting of Spills of Oil and other

Hazardous Substances

Ref: (a) BO 11090.1B

- 1. The reference provides reporting procedures requiring all personnel aboard Marine Corps Base to immediately report all spills of oil or hazardous materials to the Base Fire Protection Division (FPD), extension 3333. Effective upon receipt of this memo, notification of all spill reports will be made as follows:
- a. Immediate notification to Natural Resources and Environ- Discussed with mental Affairs Division (NREAD) will be made by FPD for all spills chiffiner on or likely to reach water and spills on land of 100 gallons or more regardless of time. Spills less than 100 gallons contained on land will be reported by FPD to NREAD during working hours, FPD will not have i.e., 0800 to 1630. Names and phone numbers of NREAD personnel of 0800 or work days to be contacted after working hours will be provided to FPD and spill securing during kept current by NREAD.
- b. Immediate notification to Base Maintenance Division (BMD), attention: Maintenance and Repair (M&R) Director (extension 5855/5184), will be made by FPD for all spills occurring during normal working hours. All spills occurring after working hours will be reported by FPD to Emergency Maintenance, BMD extension 3001. BMD will have one supervisor on duty or call at all times to assist in emergency spill containment and cleanup. Names and phone numbers of M&R supervisor(s) to be contacted after working hours will be provided to FPD and kept current by BMD.
- c. Notification to the office of the Assistant Chief of Staff, Facilities, will be made by FPD for all spills on water or spills of more than 100 gallons on land for which spill reports are received during working hours, i.e., Monday through Friday, 0800 to 1630.
- d. Notification to the Command Staff Duty Officer (extension 2523/2528) by the FPD will be made for all spills reported outside the working hours mentioned above.

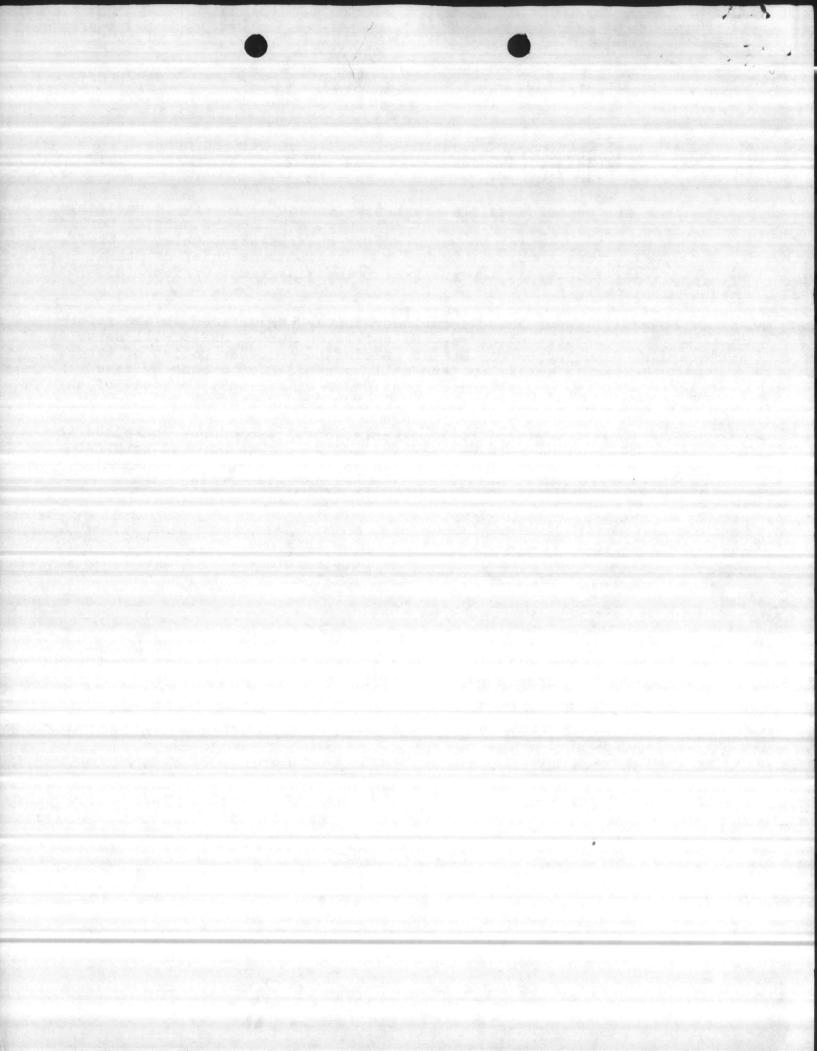

Subj: Notification of Reporting of Spills of Oil and other Hazardous Substances

- e. For reported spills presenting potential threat to navigable waters, home, health or loss of property which occurs outside working hours mentioned above, FDP will notify the Assistant Chief of Staff, Facilities (455-5023), or Deputy to the Assistant Chief of Staff, Facilities (328-0958), or the Facilities Management Officer (353-7611) at home.
- 2. FPD will serve as on-scene coordinator, as defined in the reference, for containment of routine spills on land. NREAD will serve as on-scene coordinator for spills on streams or other bodies of water. Non-routine oil spills on land will be handled on a case by case basis, with the understanding that NREAD will report to scene of any spill if so requested by authorized FPD representative.
- 3. NREAD will monitor the implementation of procedures contained in this memorandum. These procedures should be incorporated by NREAD into the next revision of the reference. Any questions concerning reporting procedures should be directed to this office.

NEWSON POLICE THE STANDARD OF THE STANDARD

The second of th

23 September 1985

MEMORANDUM FOR THE RECORD

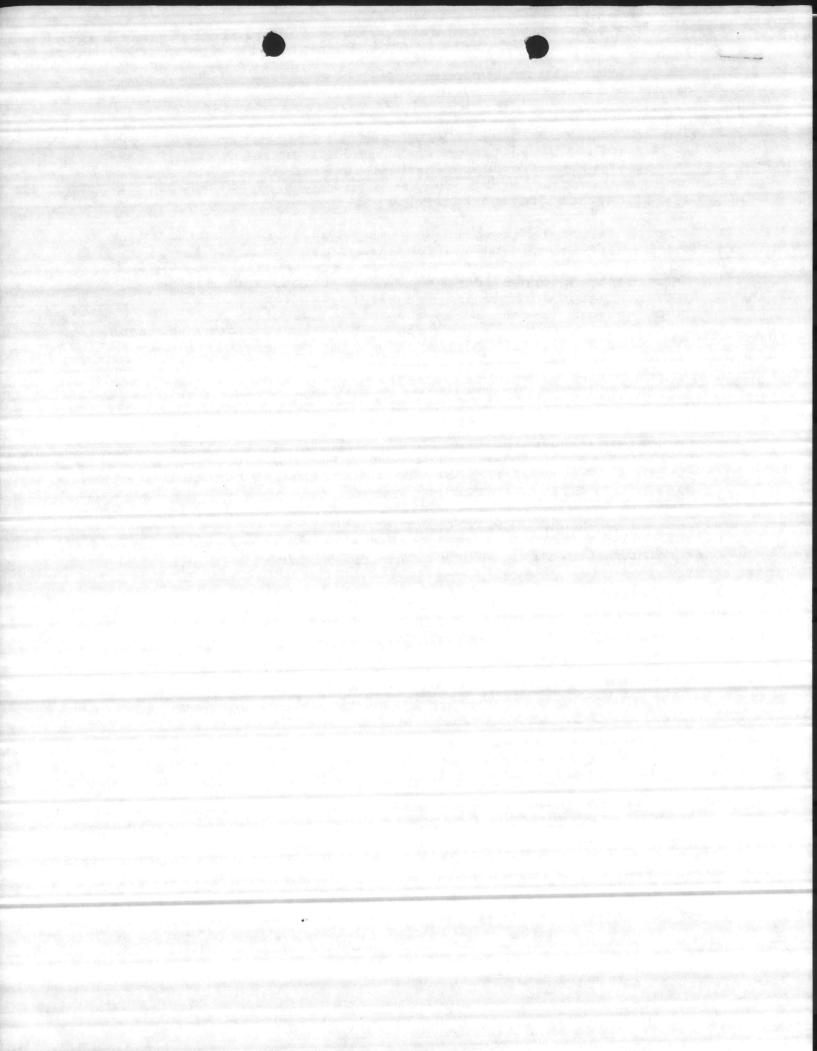

From: Director, Natural Resources and Environmental Affairs

Division, Marine Corps Base, Camp Lejeune

Subj: TT Service Station Fuel Spill

- 1. At approximately 1107, 23 September 1985 I was instructed by Mr. B. W. Elston, Dep AC/S Facilities, not to report a suspected gasoline spill at TT, MCX Service Station, Bldg 772453 until a suspected underground tank could be pressure tested. I told Mr. Elston I thought we should report the spill based on LTCOL Robinson's conclusion that the 4,400 gallons of gasoline had leaked out of the underground tank. LTCOL Robinson has eliminated theft and bookkepping error as possibilities for the shortage. Mr. Elston indicated he wanted to confirm the spill by pressure testing the tank before reporting the spill. He further indicated the tank was connected to other underground tanks and the gasoline may have been pumped out.
- 2. Mr. Elston indicated Fred Cone, Dep BMO, had the TT Service Station tank testing/leak determination for action and would advise me as to what was discovered concerning the missing 4,400 gallons of gasoline.
- 3. Mr. Elston indicated there was no evidence of the spill detected by the BFireDept this morning. I advised him I couldn't find anything Saturday a.m. except an odor of gas from soil on top of the tank. I told Mr. Elston, "okaye" when instructed not to report the suspected spill to the state.

PERSON CALLED (Name, Title, Location & Telephone Number Charged)				4097				
Bill Cochrane Division of Environmental Management Wilmington, NC 256-4161	COMMENTS	, e ga						
SUBJECT 24 July 1985 oil spill at Bldg. 1605/1604 area								
COST OF CALL (MCB Units Only) CHARGEABLE TO STATION ALLOTMENT COST OF CALL (MCB Units Only) CHARGEABLE TO STATION ALLOTMENT								

SUMMARY OF CONVERSATION

I returned Mr. Cochraine's call. He stated that his office did not plan to take any punitive action against Captain Finsterle, the person responsible for the subject spill. Mr. Cochrane expressed concern that the potential adverse impact on the Captain's career would be inappropriate were he to be made an example of. Mr. Cochrane advised that a letter to the Commanding General would be forthcoming relative to the subject incident and other similar incidents over the past year. Mr. Cochrane advised that the letter will request that training be provided to COs and supervisory type personnel in the areas of spill prevention, reporting, cleanup and related regulations.

6280/1 FAC & APR 1985

From: Commanding General, Marine Corps Base, Camp Lejeune
To: Commanding Officer, Marine Aviation Group 26, 2d Marine
Air Wing, Marine Corps Air Station (Helicopter), New

River, North Carolina 28545-5000

Via: Commanding Officer, Marine Corps Air Station (Helicopter), New River, North Carolina 28545-5000

Subj: REQUEST FOR ENVIRONMENTAL REVIEW, EXERCISE BOLD STRIKE

Ref: (a) CO, NAG-26 ltr 11000 5-4 dtd 7 Mar 85 w/end

- 1. Review of the reference indicates potentially significant environmental impacts with the bulk fuel movement from MCAS(H), New River to TLZ Bluebird via LCU's. The reference does not contain a spill contingency plan addressing spill response capabilities in the New River during the movement of the fuel.
- 2. Due to the potential for rupture of the 20,000 gallon bladders being transported on LCUs, and the lack of response capabilities for spills on the New River, significant aquatic pollution could occur. In view of these risks, the proposal for transporting fuel bladders cannot be approved.
- 3. As described to Captain Toole, MAG-26, during the phone (150/600) conversation with Mr. Alexander, Facilities Department, Marine Corps Base, on 21 February 1985, the capability for offshore spill response does not exist at Camp Lejeune. In the event of a spill, the command would be required to contract for commercial spill cleanup services. These costs would then be reimbursed from exercise funds.
- 4. The alternative to use trucks, driven aboard the LCU, to transport the fuel, will be environmentally acceptable provided a spill contingency plan is prepared which depicts measures taken/planned for spill prevention and control. The spill plan for truck transport of fuel via LCU's on the New River should include on-board spill prevention and control measures to include, as a minimum:
- a. Transporting only trucks which have been inspected and no leaks or drips detected.
- b. An adequate supply of absorbent material on board the LCU and at loading/unloading locations to contain minor drips and leaks.
- c. Positive communications at all times with Range Control and the Base Fire Department for prompt spill reporting on water or on land.

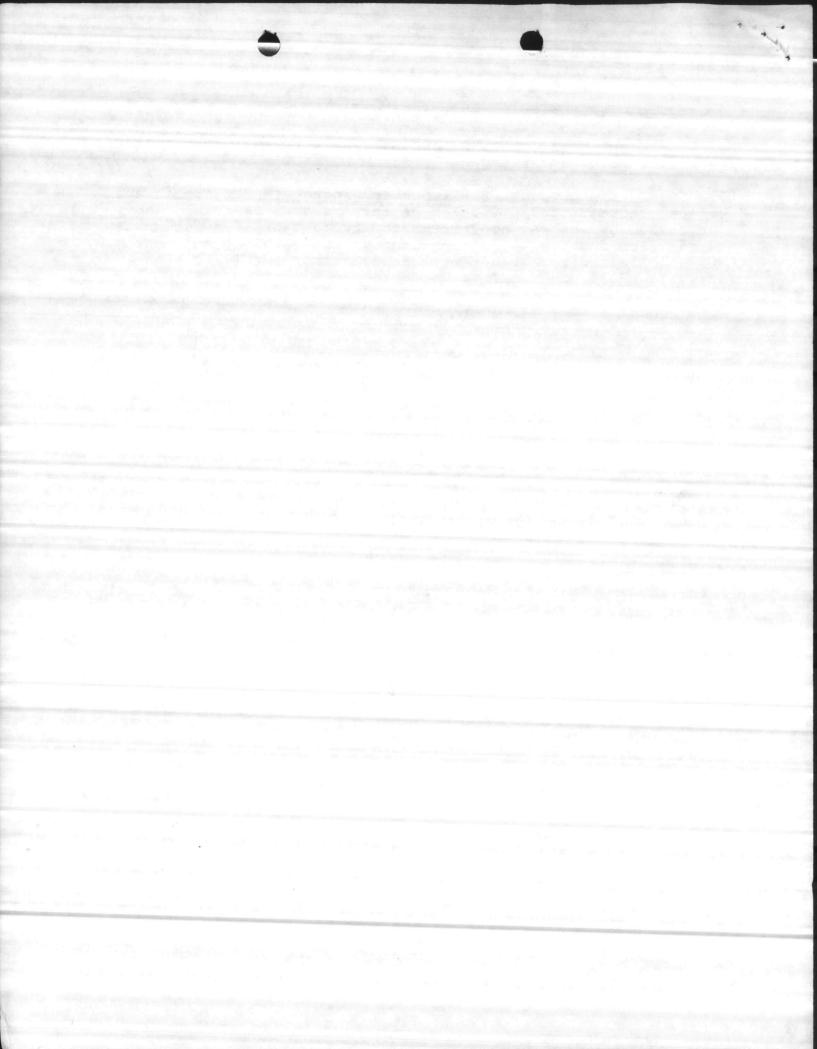

Subj: REQUEST FOR ENVIRONMENTAL REVIEW, EXERCISE BOLD STRIKE

d. Preplanned locations enroute where a leaking or ruptured tank truck can be offloaded.

5. Should the proposal for truck transport via LCU continue in effect, request the spill plan be forwarded as described above for review by the Marine Corps Base Environmental Impact Review Board. For further assistance in developing this plan, contact Mr. Bob Alexander, Marine Corps Base Environmental Engineer, extension 3034.

SOLID SHIELD-85 AMPHIBIOUS ASSAULT BULK FUEL SYSTEM (AABFS)/
AMPHIBIOUS ASSAULT FUEL SYSTEM (AAFS) TACTICAL DEPLOYMENT MEETING

MEETING MINUTES

- 1. Colonel BRABHAM, Assistant Chief of Staff, G-4, II MAF, welcomed the attendees and prefaced the meeting with the theme that the deployment of the AABFS/AAFS was a unique and critical training opportunity considering the impact that fuel availability on the battlefield has on mission accomplishment.
- 2. Major CASTAING, the Assistant Logistics Planner, II MAF, provided a brief statement on the intent of the meeting, which was the dissemination of information to interested agencies regarding the deployment of an AABFS/AAFS during Solid Shield-85.
- 3. Mr Chuck MAGUIRE, LANTNAVFACENGRCOM, gave a brief on the process by which his agency assessed the environmental impact of Solid Shield-85 on the Camp Lejeune area, to include the deployment of the AABFS/AAFS.
- 4. Lieutenant Commander ECKLES, PHIBCB-TWO, gave a brief on the process by which the AABFS will be installed from ship-to-shore. The following points were briefed:
 - a. Fuel line payout process
 - b. Anchoring of the fuel line
 - c. Emplacement of bouy markers
 - d. Installation timeframes
 - e. Fuel line air testing procedures
 - f. Maritime control of the deployment site
 - g. Rate of fuel discharged through the fuel line
 - h. Fuel line retraction process
 - i. Planned spillage control procedures
- 5. Captain BALESKIE, 1st Bulk Fuel Company, gave a brief on the process by which AAFS will be married to the AABFS. The following points were briefed:
 - a. Overland spillage control procedures
 - b. Establishment of the fuel farm
 - c. Fuel dispensing procedures

- 6. Subsequent to the briefings, a general question and answer session was conducted. The following issues were discussed/resolved:
- a. It was agreed that the AABFS/AAFS will be employed without the benefit of a causeway section to support the fuel line, an artificiality introduced in the previous Solid Shield exercise.
- b. It was agreed that a spillage containment boom would not be employed; a containment boom was employed during the previous Solid Shield exercise. It was felt that a boom would be ineffective in containing a spill (i.e., JP-5 would quickly evaporate/disperse in the surf).
- 7. There was unanimous agreement that the deployment of the AABFS/AAFS was well planned, and that all environmental considerations had been properly addressed. There was no opposition voiced concerning the deployment of the AABFS/AAFS during Solid Shield-85.

To: Base Maintenance Officer, Marine Corps Base, Camp Lejeune

Sub1: OIL SPILL PREVENTION; PREVENTION OF VANDALISM

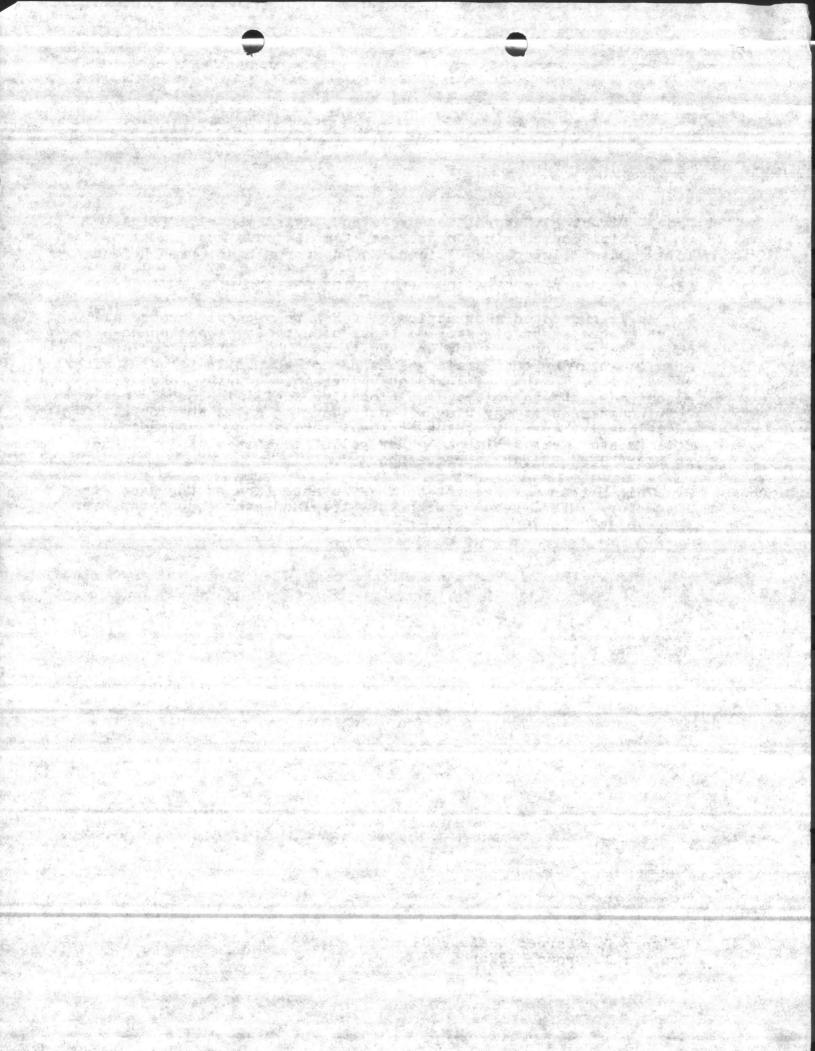

1. It is requested that action be taken to properly secure all above ground waste oil storage tanks used by Base Maintenance for consolidated storage prior to turn-in to DPDO. Of particular concern is ensuring that drain valves cannot be easily tampered with/vandalized. The use of locks on valves and security fencing is recommended at each site. Additionally, facilities should not be left unattended at any time without securing gates and locks. Additionally, current status on the installation of unloading pad, spill containment basin and other pollution abatement facilities at MCAS(H) New River is requested.

2. This matter was brought to NREAD's attention by the Base Fire Inspector. NREAD concurs with the Fire Inspector's concerns over the subject problem.

(b) Solid Shield-85 AABPS Mtg at MCB CLNC on 26 Feb 1985

(c) CG Breakfast with Special Staff Officers on 27 Feb 1985

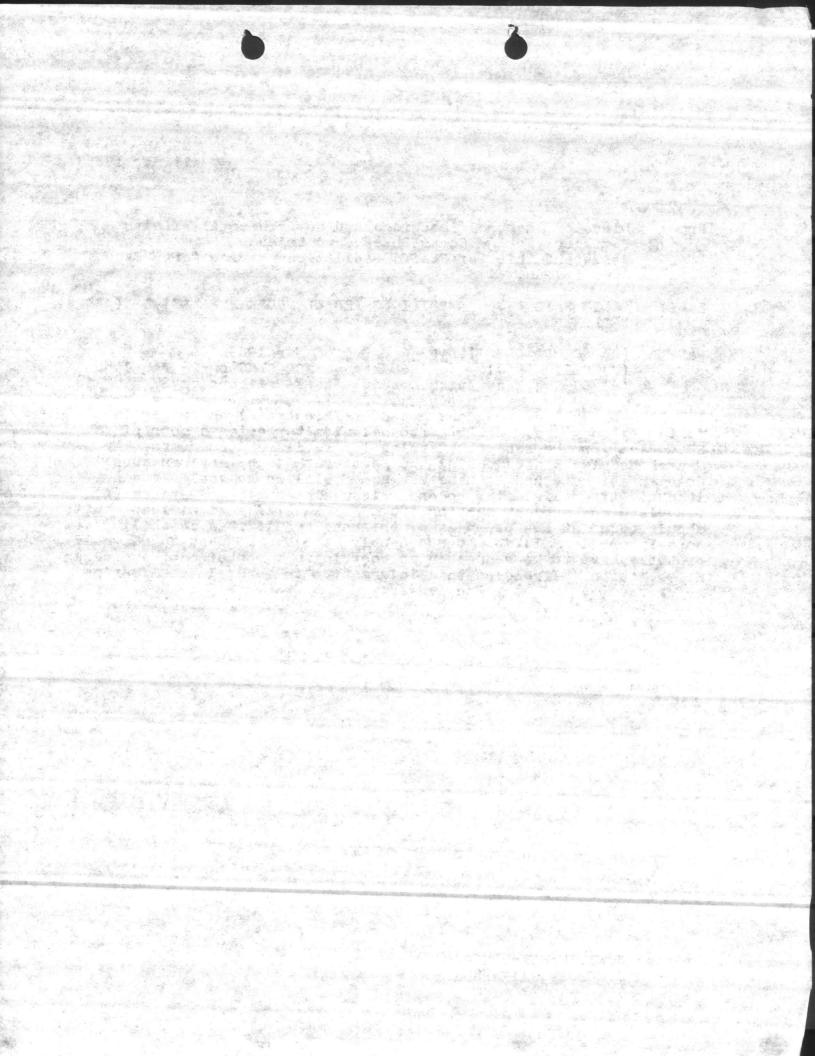

1. I have reviewed the contents of reference (a) and offer the following comments. NREAD personnel didn't receive a copy of the SPCC Plan for the subject exercise for review and comments. Mr. Church McGuire stated during the meeting that the environmental documentation he had in hand was unofficial so he couldn't pass it cut. After listening to oral discussion during reference (b), I advised the subject meeting attendees that if a significant spill should occur at sea or on land, the base had limited capability to contain or clean it up. Consequently, the U. S. Coast Guard would probably have to be requested to coordinate a containment and clean-up operation. I relayed this information to General Buehl during reference (c) and he acknowledged.

Underground Storage Tanks - Main Fuel Ferm, et al.

End (1) Except from come Into highlights

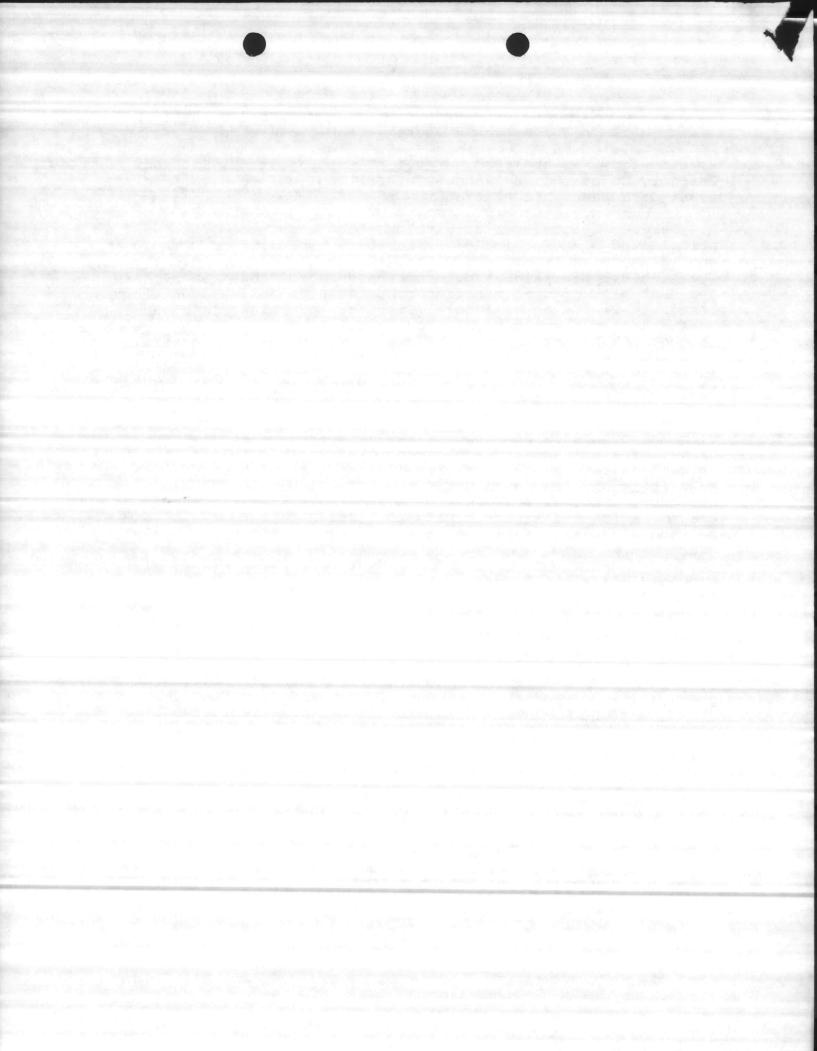

Forwarded for your into on the subj.

This maybe adds to the proposed base-wide study of 1989 which was never done - and, some of it seems useful to do which was never done - and, some of it seems useful to do under the NACIP study, too. "/K Both.

Elements of a Proposed Scope of Work for an Underground Storage Tank Evaluation

- A. Identify all underground fuel oil storage tanks (DOD/DON Category Codes 124, 441 and 821-60/61) to include Naval Facility Asset Data Base (NFADB) property record numbers.
- B. Develop in conjunction with MCB Camp Pendleton personnel, a prioritized plan for implementing corrective actions. The plan should numerically prioritize tanks from highest to lowest risk. The highest priorities should be assigned to those tanks posing imminent risk of contaminating groundwater supplies, constituting immediate violation of Federal/State/or local laws, and causing health hazard to personnel. Lowest priorities should be assigned to those tanks posing no immediate health/regulatory hazard. To assist in prioritization, this task will likely require tank integrity testing and/or soil sampling on the vicinity of high risk tanks.
- C. Perform a technology assessment on methods for treatment/ disposal of contaminated soil resulting from leaking storage tanks. The assessment should consider possible in situ treatment as well as removal for off-site disposal, and include an analysis of regulatory hurdles which must be met for a particular clean up strategy. (For example, use of a mobile incinerator to remove contamination and return of the sterilized soil to the site may be technologically feasible, but can regulatory restrictions be overcome?)
- D. Use data developed in tasks B and C to select the most efficient and cost effective means to correct each tank problem. Recommended corrective actions should be phased by fiscal year (FY86-FY90), with phasing based upon risk assessed.
- E. Prepare appropriate project documentation. Separate projects should be prepared for each tank/group of tanks to accommodate fiscal year phasing and different fund sources. (Fund source is dependent upon whether project includes repair/replacement of tanks or is strictly tank and contaminated soil removal).

4020 MAIN 14 FEB 1985

From: Base Maintenance Officer, Marine Corps Base, Camp Lejeune To: Assistant Chief of Staff, Facilities, Marine Corps Base, Camp Lejeune

Subj: POL FACILITIES

Ref: (a) Oil Spill Prevention Control and Countermeasures Plan, dated 10 Jun 78

(b) Contract #80-2121, Inspection and Test Petroleum Storage Facility

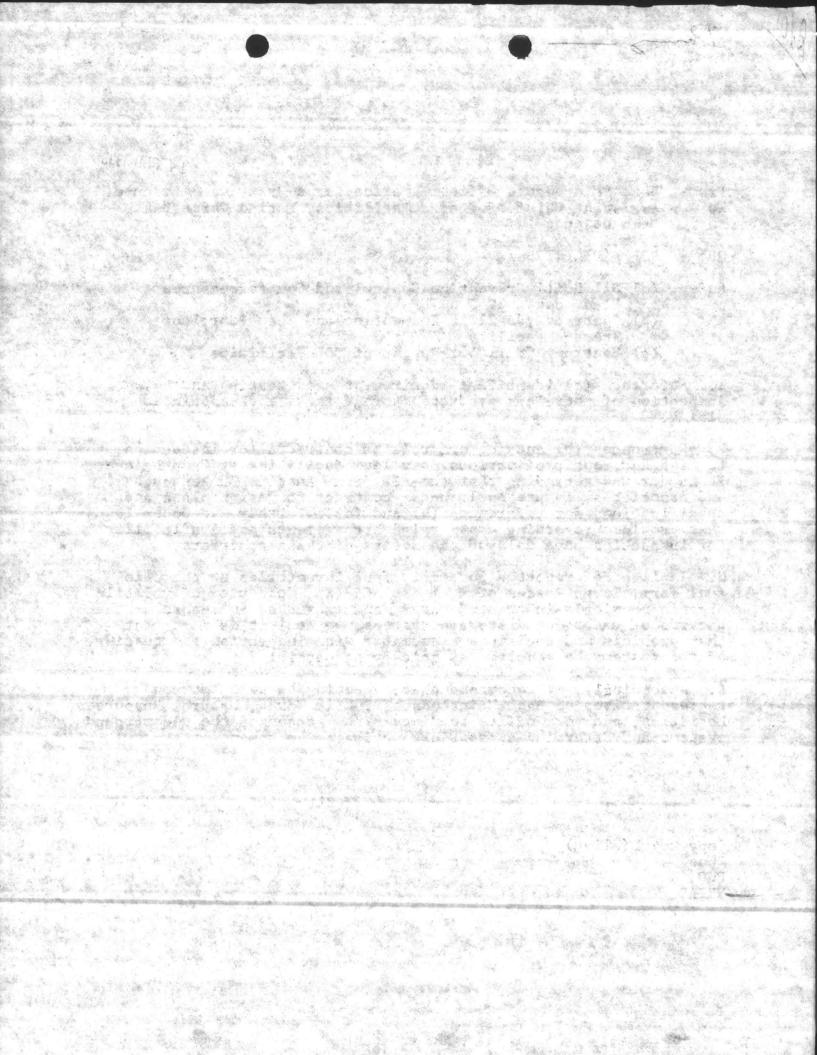

(c) Contract #81-1452, Repair of POL Facilities

- 1. Reference (a) identifies requirements for testing and inspection of petroleum products storage tanks and associated piping.
- 2. References (b) and (c) are related contracts for inspection, testing and repair of various petroleum facilities at Camp Lejeune. It is our understanding that the A&E firm, Austin, Brokenbough and Associates, is presently under contract to design plans and specifications for references (b) and (c). Further, we understand that problems regarding cost, valve arrangements and availability for inspection have delayed the design of these contracts.
- 3. In light of reported losses in fuel inventories at the main fuel farm, large losses of fuels at MCAS(N), detection of volatile organic chemicals in treated water, and increased awareness of the hazards of underground storage systems, we feel it is important that problems and decisions associated with inspection and testing of the systems be resolved as quickly as possible.
- 4. Accordingly, we recommend that a meeting be held between representatives of Base Maintenance, Public Works, Natural Resources, Logistics, and your office to discuss the status of the underground systems and determine appropriate action to be taken.

TACTICAL DEPLOYMENT

Ref: (a) USCINCLANT 101904Z Jan 85

Encl: (1) List of Suggested Attendees

- 1. As requested by LtCol Higginbotham, G-4 Plans Officer, the enclosure is forwarded. Request the attendees as listed be provided with the detailed Spill Prevention, Control and Countermeasures (SPCC) Plan for deployment of the AABFS in the tactical mode. The SPCC Plan should also be included in the Preliminary Environmental Assessment which is currently in preparation by LANTDIV.
- 2. The provision of off-shore spill response capability will be the primary interest of the agencies represented. The review and, in some instances, approval of the SPCC Plan by these agencies will be needed prior to the conduct of the exercise. The coordination between the Navy, the Coast Guard, and this Command for provision of the spill response measures will enable this Command to comply with applicable environmental statutes for exercise activities at Camp Lejeune.
- Point of contact for this matter is Mr. Bob Alexander, MCB. Environmental Engineer, Autovan 434-3034.
