NAVAL REGIONAL MEDICAL CENTER

CAMP LEJEUNE, N. C. 28542

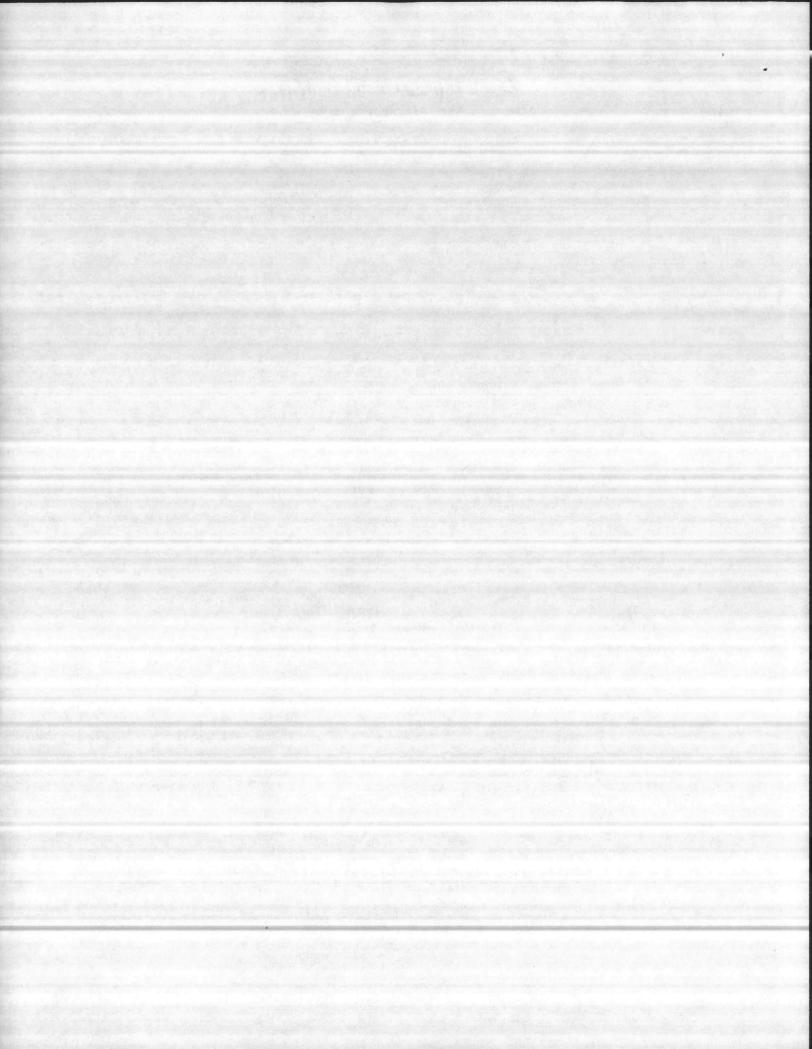

MCLO:HEP:ca 8 Jan 1980

MEMORANDUM FOR THE RESIDENT OFFICER IN CHARGE OF CONSTRUCTION, NAVAL REGIONAL MEDICAL CENTER, CAMP LEJEUNE, NORTH CAROLINA 28542

Subj: Kitchen Equipment Submittal

- Ref: (a) MCLO Memo for the ROICC; Subj: Cardinal Contracting Medical Equipment Submittal No. 580-583 of 9 Jan 1980
- Encl: .(1) Cardinal Contracting Company Submittal No. 555-556 dtd
- 1. The Kitchen Equipment Submittals, under Section 11400 of the Specs, contained in enclosure (1) have been reviewed. The following comments are forwarded:
- a. Item No. 39, Patient Tray Make-up Line: The tray flow will be clockwise in direction. The SECO Unit has as a standard feature a limit switch at the "checker positions" which will stop the carousel and allow the patient tray to be verified against the menu order. This limit switch, as shown in enclosure (1), is in the wrong location at the south end of the tray line. Under the design in this project, tray make-up will begin on the east side of the carousel with cold foods and desserts added on the south end, hot foods, bread, milk, and ice cream on the west side of the line, and checking and delivery cart loading at the north end of the line. This problem can be corrected by rotating the carousel 180 degrees, which will place the limit switch in the correct location at the north end of the line. In rotating the unit, it must be remembered that the electrical outlets for the hot food units must remain on the west side of the line. This will require a correction of the drawings to show these outlets in the proper locations after the unit is rotated. A 12" x 16" tray will be utilized on the carousel.
- from the Construction Contract, as the specified units are incompatible with the government owned Patient Feeding System; These units will be provided as part of the government furnished equipment. The electrical service currently called for remains a requirement.
 - c. Item 74, Soup and Sandwich Module: The specifications called for the lower storage compartment in the unit to be refrigerated. This requirement is not reflected in the information submitted by the contractor.

 SHOP DWG 9202-142-06 1801(2783 REFRIGE.
 - d. Item 76, Salad Module: The diameter of the plate that will be used is 6 3/4". The current Salad Module is designed to use pre-plated salads.

This concept is labor intensive and is not in line with the generally accepted buffet method of dispensing salads through a self-service salad bar. Minor changes to the existing module would allow us to provide this type of salad service, reduce kitchen labor, and increase the flow through the cafeteria line. The first change would be the substitution of a buffet style food shield for the two tier display case. The second change would be the addition of a tray slide on the rear of the module. Should it not be possible to make this change to the Salad Module, please notify this office, so that a request for change can be forwarded to BUMED.

- e. Item 77, Dessert Module: The diameter of the plate that will be used is 6.3/4".
- f. Item 86, Ice and Soda Dispenser: This is currently the only ice machine in the Food Service. The 150 pound storage capacity and regenerative capability of the unit is not sufficient to handle the cafeteria line and kitchen requirements. We currently use in excess of 200 pounds of ice during a 75 minute feeding period. The unit offered provides no drinking water dispensing capability. This service is required from this unit, as drinking water is not available at any other location on the beverage line. It is also noted that the contractor is offering a storage area 25" high for the premixed soft drink tanks. The standard tanks being utilized are 24" high, and when the supply hose is connected to the top of a tank, the unit is 26" high. This raises the question as to whether standard premixed soft drink tanks will fit properly into the storage space provided. It is requested that the manufacturer reverify that the 25" height is sufficient.
- 2. Due to the inadequate storage and regenerative capacity of the ice maker offered for Item 86, an additional ice making capability is required in the Food Service. A solution to this problem is offered in reference (a).
- 3. It is requested that a copy of the Kitchen Equipment Submittal be made available to this office, as it is necessary to ensure compatibility of future government purchased items with the built-in equipment provided under the Construction Contract. Should there be any questions, or any additional information required with respect to the comments contained in this memorandum, please contact this office.

P.S. - The deletion of the Mellys

thue heated lowerators (Stems H. E. PHILLIPS
