ISAPPROVED ALCAN STABILOY® 600V THW IUL

DESCRIPTION: Alcan Type THW building wire is designed for general-purpose wiring in residential, commercial and industrial buildings. It meets the requirements of Underwriters Laboratories Inc. Standard # 80 for Type THW with a maximum operating temperature of 75°C in wet or dry locations. Rated at 600 Volts, the cable is approved for use in accordance with the recommendations of the National Electrical Code. Alcan. Type THW meets the requirements of Rederal Specification JC-30A

CONDUCTOR: STABILOY compact stranged sect 10 1

See Note 1 BUILTAL DOES NOT INCLUDE APPROVAL OF ANY DEVIATION FROM THE CON-INSULATION: Black polyvinyl chloride (PUCPTSee Not

MARKING: Cables will bear the following supports the pact AL STABILOY 600 Volt THW (UL). TOR CALLS THE CONTRACTOR FROM CONTRACTOR OF AND SUPPORTS THE PACTOR OF THE CONTRACTOR pact AL STABILOY 600 Volt THW (UL). RESPONSIBLE FOR PROVID PENSIONS & WEIGHTS, COORDINA

Alcan Cable is a division of Alcan Aluminum Corporation. Founded as Central Cable Corporation in 1939, Alcan Cable was acquired by Alcan and renamed in 1964. As one of the five operating divisions of Alcan Aluminum Corporation, Alcan Cable is an important member of the international Alcan Group of more than 90 companies worldwide.

Alcan Aluminum Corporation employs almost 5,000 people and is the fourth largest aluminum fabricator in the United States. Alcan Cable Division employs approximately 575 people in four manufacturing plants, two sales offices and the Headquarters Office. Additionally, Alcan Cable Manufacturer's Representatives operate twenty strategically located sales offices with warehouses plus eight additional sales service facilities.

Alcan Cable's headquarters is located in Atlanta, Georgia, with cable manufacturing plants in Tucker, Georgia; Williamsport, Pennsylvania; Sedalia, Missouri; and Bay St. Louis, Mississippi.

The plant in Tucker, Georgia concentrates production in high-voltage, long distance transmission cable (ACSR, all-aluminum and self-damping conductors).

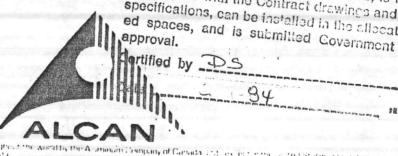

Williamsport houses the Alcan Cable rolling mill where wire bar is rolled into redraw rod for wire production at the other plants. Williamsport also produces bare overhead products, polyethylene and cross-linked polyethylene covered service drop cables and 600 Volt cross-linked polyethylene insulated underground cable.

The Sedalia plant concentrates production in aluminum building wire products and aluminum service entrance cables. Our STABILOY building wire is fabricated here.

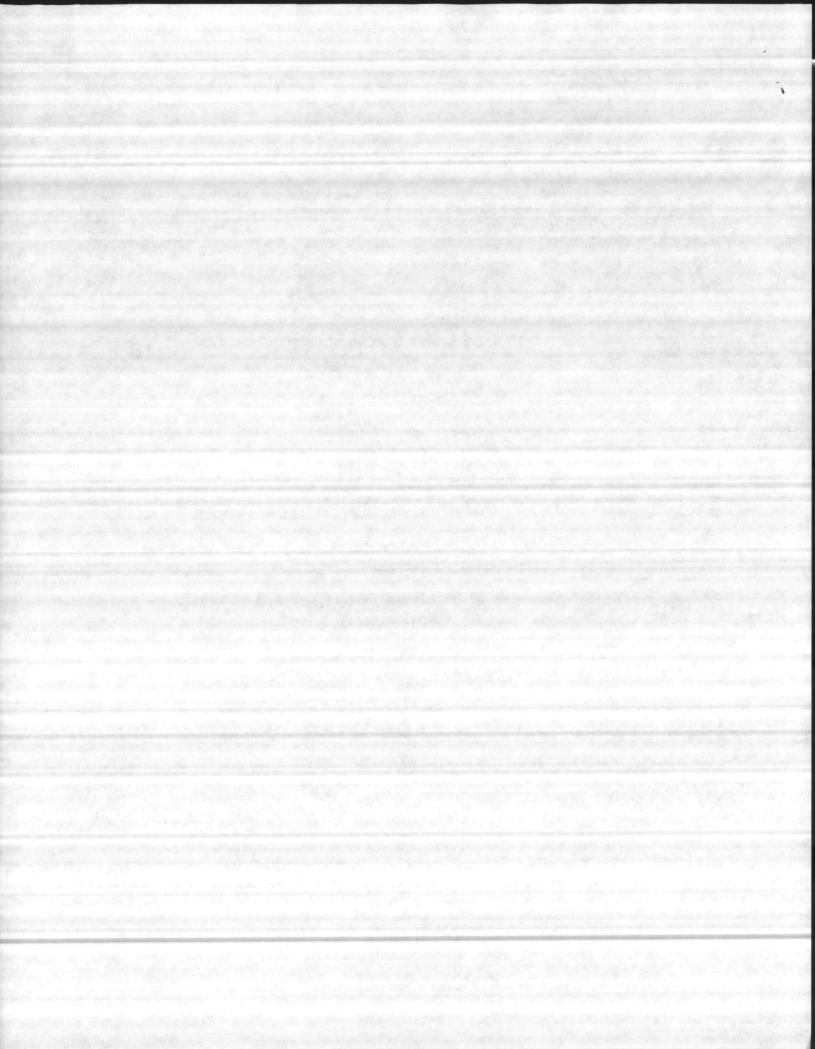

Bay St. Louis is the home of the Alcan facility dedicated to the production of 600 Volt cross-linked polyethylene underground distribution cable.

ALCAN CABLE is backed by the research, development and manufacturing facilities of Alcan Aluminium Limited. We're proud of our long history of providing new and innovative products to the many customers we serve. We're always at work, improving our products and preparing our company to satisfy the needs of our customers and the aluminum industry both today and as we move into the twenty-first century.

"It is hereby certified that the (equipment) (material) shown and marked in this submittal is that proposed to be incorporated into Contract Number N32470 81-C-(Y(4)) in compliance with the Contract drawings and specifications, can be installed in the allecated spaces, and is submitted Covernment

ALCAN.

Larry Farina

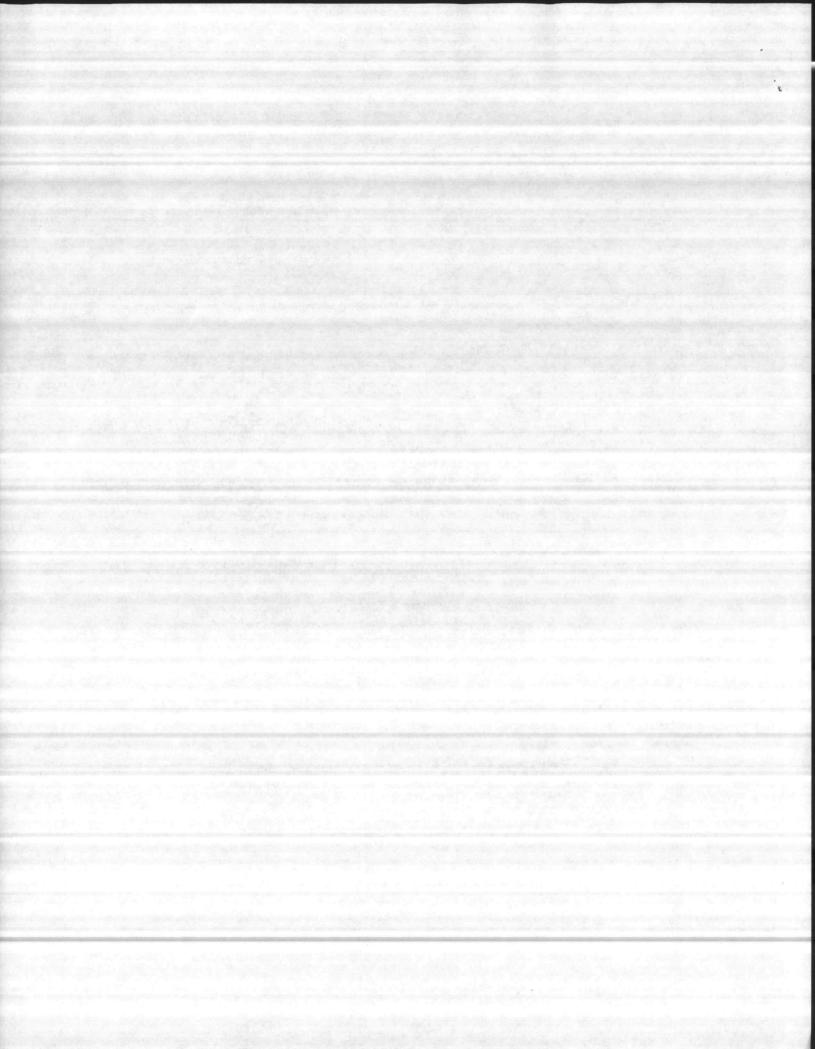

1.3.3.2 Workmen's Competancy: Submit cable splicer's certificate of competency.

PART 2 - PRODUCTS

- 2.1 MATERIALS AND EQUIPMENT: Provide materials and equipment listed by UL or approved by Factory Mutual (FM) System, when such equipment is
- 2.1.1. Conduit: Conduit shall be rigid not-dipped galvanized steel or plastic conforming to the following:
- 2.1.1.1 Rigid galvanized steel conduit and fittings shall conform to the requirements of UL 6 for threaded type.
- 2.1.1.2 Plastic duct for concrete encased burial shall be PVC and shall to NEMA TC6, Type EB and NEMA TC8, Type DB. Fittings shall conform to NEMA TC9.
- 2.1.1.3 Outlet boxes for use with steel conduit, rigid or flexible shall be cast-metal cadmium or zinc-coated if of ferrous metal with gasketed closures and shall conform to UL 514.
- 2.1.2 Tape: Plastic insulating tape shall conform to the requirements of UL 510.

2.1.3 Wire and Cable:

- 2.1.3.1. Wire and Cable conductor sizes are designated by American Wire Gauge (AWG). Conductor and conduit sizes indicated are for copper conductors, unless otherwise noted. Insulated conductors shall bear the date of manufacture imprinted on the wire insulation with other identification. Wire and cable manufactured more than 6 months before delivery to the job site shall not be used.
- 2.1.3.2 Conductors rated 600 volts and less, including service entrances, shall conform to UL 854 Type USE. Conductors shall be copper. Cable shall be color coded. Conductors in each cable shall be as indicated. Within each enclosure where a tap, splice or termination is made. Conductor identification shall be provided identification shall be by color coded insulated conductors, plastic coated self sticking printed markers, colored bylon cable ties and plates or heat shrink type sleeves. Control circuit terminations shall be properly for copper conductors No. 4 AWG and larger.

Public Works N62470-81-C-1766

Reasons for Deviation

- 1. Wire incorrectly shipped to job and installed.
- 2. Wire is suitable for wet location.
- 3. No Change in contract time.
- 4. Contractor proposes to reduce contract price to reflect difference in cost of USE Cable and THW cable per standard change order procedures
