Notes

1. Hadnot Point and Marine Corps Air Station-New River systems serve populations between 10,000-74,999.
2. These systems serve populations less than 10,000.
3. One of the distribution points were secured, so only four points were averaged instead of the usual five.
4. In February 1983, the Onslow Beach distribution points were secured. Therefore, the only point collected was at the beginning of the distribution system.
