**Subject:** Water Open House

Ladies and Gents,

Just a short note to keep you up to date. The best location for this event for the second week in January is the Tarawa Terrace community center. It has a large auditorium capable of holding about 200 people, and can supply all the tables, chairs and partitions we may need. Also, it has the additional advantage of being in TT. Marston Pavilion is scheduled for renovation in January, and the Field House is not available.

Tentative date is 12 January, a Wednesday, from 0900 to 1500.

NEHC thinks having ATSDR at the Open House would be a good idea. I've talked it over with Marie Socha at ATSDR (she's the project manager), and she concurs. She may attend herself. We're still hashing out details.

Have a great Thanksgiving!

V/R

Scott,  
We (EMD) will address the questions 1 and 2 and recommend Fred answer question 3.  
Take care,  
N

Gentlemen,

Below are the last 3 questions on the Water Survey PA plan that I do not have answers for. Please provide something by COB Friday. The answers do not need to be lengthy; a few sentences with the main ideas should suffice. Thanks.

Q5a How are the affected wells at Camp Lejeune being/have been cleaned up/remediated?

Q5a

Q7c What are the current standards regarding use/disposal of these compounds?  
A7c

Q17a Why was water from the Hadnot Point system, which you knew had been contaminated as early as 1980, pumped into the Holcomb Blvd system? (NOTE: this question refers to the Jan/Feb 85 incident in which water from Hadnot Blvd was pumped into the Holcomb Blvd distribution system when that system was contaminated by a broken fuel line)

A17a

Neal,

The following are answers to the first two questions that Maj. Fazekas requested our assistance with. I solicited John Riggs' assistance on the second question and have incorporated his answer. Please let me know if you have any corrections or changes that you would like me to make before I send this to Maj. Fazekas.

Please let me know if you have any comments or questions.

Thanks,  
V/R  
Tom

**ANSWERS TO QUESTIONS ON THE WATER SURVEY PA PLAN**

Q5a How are the affected wells at Camp Lejeune being/have been cleaned up/remediated?

A5a All supply water wells contaminated with VOCs have been closed and properly abandoned. Remediation systems (pump and treat plants) have been constructed to clean up the contaminated groundwater.

Q7c What are the current standards regarding use/disposal of these compounds?

A7c Use of these or similar chemical compounds aboard Camp Lejeune, and by tenant commands, is extremely limited and occurs only at authorized facilities under strict management guidelines. These facilities are granted authorization on an annual basis following assessment/inspection by both command operational personnel and compliance personnel assigned to the AC/S Environmental Management Department. Spent compounds are tracked by the Environmental Management Department, Resource Conservation and Recovery Branch through the Defense Reutilization and Marketing Office and to their ultimate point of destruction.
