Re: Sodium Concentration Level
USMC New River Air Station
04-67-042, Onslow County

Dear Sir:

As indicated in our "Newsletter 10" dated February 1982, all water suppliers for community public water systems are required to collect and analyze one sample per treatment plant (or well) collected from the entry point to the distribution system to determine sodium concentration levels. Reports of analyses are due in this office by the tenth (10th) of the month following the month in which the analysis is completed.

This office has no record of a sodium analysis for your water system. If you have the results for this analysis, please send us a copy in order for us to correct and update our records. Otherwise, you should make immediate arrangements to have the water analyzed and submit the results to us as soon as possible.

You may contact the State Laboratory of Public Health at telephone number (919) 733-7308 or one of the certified commercial laboratories on the enclosed list for the required analyses.

If you have any questions or need assistance, please feel free to contact Mr. John McFadyen or Mr. Tommy Cross at telephone number (919) 733-2321.

Very truly yours,

Charles E. Rundgren, Head
Water Supply Branch
Environmental Health Section
