8-28-86 - The contractor left a mess in the filter deck and in  
the hoods. They used our bucket + Swab which they just left for me to  
empty and clean. They also left water standing in the head and  
on the filter deck. I got the worst of it up but I imagine they  
will just screw it up again so I didn't "shine it" SP

11-20-86 2320. Murrell called and said when he cut off the  
throttled down high lift pump he lost 4 lbs of pressure  
(about normal) He then continued to lose pressure until  
plant stabilized at 53 lbs. I told him to turn high lift on  
and get pressure back to normal and see if we could  
maintain it. Sounds about normal but there might  
be a leak. (SP)
