10 days, Q.I.D. Ok for all activity.

Date of Injury 07/26/1998 Estimated # days out ??

Incl# 5 Gradual Onset: Other, Insidious  
Incl# 1 HIP GLUTEUS MAXIMUS STR 1 DEG

Anatomy musculature > muscle groups > hips and pelvis > gluteous maximus muscle  
Injury muscle / tendon injuries > muscle strain

Details Roger received a B-12 injection approximately 7-10 days ago into his right buttocks from Dr. Taylor at Skydome. Roger started complaining of right buttocks soreness on July 26, 1998 after his start. He was examined by Dr. Gross on July 28, 1998, diagnosis was a small collection of blood below the surface of skin. Ok for all activity. Therapy should consist of hydrocollator packs, and ice packs alternating, plus Dr. Taylor prescribed Cloxacillin 500 mg BID for 10 days. Monitor.

## HIP GLUTEUS MAXIMUS CONTUSION

### RECOMMENDED THERAPY

Heat pack, ice therapy.

### RECOMMENDED MEDS

Cloxacillin 500 mg

### COMMENTS

MRI was negative for abscess.

### EVALUATION:

MRI performed at Mount Sinai, results were negative for an abscess. Dr. Gross recommends current therapy of heat and ice. Massage as tolerated, all activity as tolerated. Monitor palpable mass.
