Statement of Gregory H. Friedman

Inspector General

U.S. Department of Energy

Before the

Subcommittee on Investigations and Oversight

Committee on Science, Space, and Technology

U.S. House of Representatives

Mr. Chairman and Members of the Subcommittee:

I appreciate the opportunity to testify today at your request on the work of the Office of Inspector General (OIG) concerning the Department of Energy's (Department) activities related to the American Recovery and Reinvestment Act of 2009 (Recovery Act). The intent of the Recovery Act was to quickly stimulate the economy, create jobs and, in the case of the Department, help transform the agency's mission. All of this was to be achieved in an atmosphere of unprecedented accountability and transparency.

The Department's implementation of the Recovery Act has been an important topic for my office and I have testified several times on the Department's progress. On March 19, 2009, shortly after enactment, I testified before this Subcommittee about Recovery Act funding accountability and transparency. On March 17, 2011, I testified before the House Subcommittee on Oversight and Investigations, Committee on Energy and Commerce on oversight of the Department's Recovery Act spending. Most recently, on November 2, 2011, I testified before the House Subcommittee on Regulatory Affairs, Stimulus Oversight, and Government Spending, Committee on Oversight and Government Reform on aspects of the Department's use of Recovery Act funding to advance green energy development. My testimony today closely parallels my November 2, 2011, statement.

Recovery Act Funding

The Department received \$35.2 billion in Recovery Act funding for various initiatives, eclipsing its Fiscal Year (FY) 2011 budget of about \$27 billion. Some existing Departmental programs received dramatic increases in funding. For example, the Weatherization Program received \$5 billion in Recovery Act funding, a more than 10-fold increase from its FY 2009 budget of \$450 million. In addition, Recovery Act funds were used to create essentially new Departmental efforts, such as the Energy Efficiency and Conservation Block Grant Program, which received \$3.2 billion in funding.

Recovery Act funding also allowed the Department to drastically expand its Loan Guarantee Program for certain renewable energy systems. With this expanded authority, the Department estimated that it could guarantee up to \$71 billion in loans. This was in addition to over \$6 billion in borrowing authority split evenly between the Bonneville and the Western Area Power Administrations to modernize and build transmission infrastructure.

Since the enactment of the Recovery Act, the OIG has:

- Issued 70 audit, inspection, and investigative reports covering all major program
 activities (attached to this testimony is a complete listing of the OIG's Recovery Act
 reports);
- Initiated a number of Recovery Act-related criminal investigations; and,
- Conducted nearly 300 fraud awareness briefings for over 15,700 Federal, contractor, state, and other officials.

Overall Observations

As I have previously testified, while there has been significant progress, we found that the effort by the Department to use Recovery Act funds to stimulate the economy was more challenging than many had originally envisioned. Many Departmental programs required extensive advance planning, organizational enhancements, additional staffing, and training at the Federal, state, and local levels. A fairly consistent pattern of delays existed in the pace at which Recovery Act funds had been spent by grant and other financial assistance recipients. To place this in context, according to the Department's own records, as of November 18, 2011, about 43 percent of its Recovery Act funds had not been spent, largely by recipients such as state and local governments. The chart on the following page details Recovery Act funding by major program area.

Recovery Act Funding (\$ million)					
Program Office	Authorized	Obligated	Spent		
Energy Efficiency and Renewable Energy	\$16,666	\$16,655	\$10,314		
Environmental Management	5,989	5,988	5,450		
Electricity Delivery and Energy Reliability	4,488	4,487	2,019		
Fossil Energy	3,379	3,379	441		
Loan Guarantee Programs	2,470	1,918	434		
Science	1,669	1,669	1,204		
Advanced Research Projects Agency–Energy	387	384	184		
Departmental Administration	144	115	88		
Western Area Power Administration	10	9	7		
Energy Information Administration	8	8	8		
Total	\$35,210	\$34,612	\$20,149		

In addition to concerns regarding the pace of expenditures, our reviews identified performance issues that affected the Department's ability to meet its Recovery Act goals. For example, our most recent work showed that:

- There were quality problems in some of the work done as part of the Weatherization Program;
- The Loan Guarantee Program had not properly documented and, as such, could not always readily demonstrate how it resolved or mitigated relevant risks prior to granting loan guarantees;
- ARPA-E had not instituted a number of policies and procedures in areas such as monitoring and oversight of awardees; termination of non-performing awards; technology transfer and outreach; and invoice review; and,
- Western Area Power Administration had not implemented the necessary safeguards to
 ensure a successful outcome for its commitment of \$161 million to finance the
 construction of a transmission line between Great Falls, Montana and Alberta, Canada.
 At the time of our review, this project was overrun by an estimated \$70 million and was
 nearly two years behind schedule.

Regarding the Office of Science, we found that the majority of the \$1.6 billion it received in Recovery Act funding was used to accelerate ongoing projects by purchasing equipment and completing construction projects, most of which were in process prior to the Recovery Act's

enactment. To date, we have issued seven reports on the Office of Science's use of Recovery Act funds.

In contrast to the previously discussed issues, we found that the Office of Science and its laboratory system generally complied with Recovery Act requirements, expended funds in a timely manner, and employed sound project management practices. However, in one case, we found that Lawrence Berkeley National Laboratory planned to use \$2.6 million in Recovery Act funds for an infrastructure project for which there was no current demand. After we brought this matter to the attention of management, the Department elected not to fund that particular facility.

Recovery Act Investigations

The Office of Inspector General has initiated a number of investigations associated with Recovery Act activities. These involve various schemes, including the submission of false information, claims for unallowable or unauthorized expenses, and other improper uses of Recovery Act funds. To date, our Recovery Act-related investigations have resulted in over \$2.3 million in monetary recoveries as well as six criminal prosecutions.

Recovery Act Implementation and Performance Observations

The Recovery Act established challenging goals for the Department. We noted during our work that there was what we considered to be an intense effort to implement and execute the various aspects of the Department's Recovery Act responsibilities. These efforts notwithstanding, we had a number of overarching observations about the Department's implementation of the Recovery Act. These observations, which I have described in prior testimony, include:

- 1. The pressure of achieving expeditious program implementation and execution (and doing so with great emphasis on transparency and accountability) placed an enormous strain on the Department's personnel and infrastructure.
- 2. The challenges associated with the Department's Recovery Act implementation efforts were complicated by the nature of the bureaucracy in which it operates, specifically the

diverse, complex, and often asymmetrical set of stakeholders, which play an integral role in this process. This includes literally thousands of state and local jurisdictions, community action organizations in every state and territory, universities and colleges, contractors, and other private sector entities.

- 3. The concept of "shovel ready" projects was not realized.
- 4. The Federal, state and local government infrastructures were, simply put, overwhelmed. In several states, the very personnel who were charged with implementing the Recovery Act's provisions had been furloughed due to economic situations. Ironically, this delayed timely allocation and expenditures of funds intended to boost the U.S. economy and create jobs.
- 5. The pace of actual expenditures was significantly slowed because of the time needed to understand and address specific requirements of the Recovery Act.
- 6. Recipients expressed their concern with what they described as overly complex and burdensome reporting requirements.

In summary, a combination of massive funding, high expectations, and inadequate infrastructure resulted, at times, in less than optimal performance.

Path Forward

Given the significant amount of funds that remain to be spent, we have ongoing and planned reviews of Recovery Act implementation in a number of high-risk areas. Our investigative efforts also continue.

Additionally, we have used the body of our work, including Recovery Act audits, inspections and investigations, to identify a series of cost reduction and efficiency enhancement actions for consideration by Department management. These are provided in our recently issued report on "Management Challenges at the Department of Energy – Fiscal Year 2012" (DOE/IG-0858, November 10, 2011).

Finally, we are refining our observations on the Department's implementation of the Recovery Act and are drafting a report to highlight other lessons learned in the areas of risk management practices; financial management, accounting and reporting; human capital management; regulatory compliance; and delivery of public services. We are hopeful that the Department's decision makers and others with an interest in these matters will consider these lessons learned in the management of future programs and projects.

Mr. Chairman, this concludes my statement and I would be pleased to answer any questions that the Subcommittee may have.

.
