Mountains Destroyed for Coal Shipped Overseas

NOTE: This report has not been officially adopted by the Committee on Natural Resources and may not necessarily reflect the views of its Members.

Released: July 19, 2012

# Our Pain, Their Gain

#### Mountains Destroyed for Coal Shipped Overseas

One of the coal industry's favorite ads in recent years displays an orange power cord plugged directly into a piece of coal. The picture is accompanied by words assuring the viewer that coal is cheap, reliable and a key to the nation's domestic energy security. The message for Americans is that coal equals electricity in the United States, and to tamper with that would be to tamper with our way of life.

A more truthful ad would unplug the power cord and replace it with an oceangoing freightliner bound for steel mills and power plants across Europe, South America, China and India. The image of the ship leaving an export terminal would then dissolve into the naked remains of what used to be a majestic Appalachian mountain. As the camera zoomed out to show the buried remains of streams and rivers and hillsides stripped bare by mining, the announcer would tell the viewer about a dramatically changing industry that is depending more and more on exports to survive.

A growing body of research shows that mountaintop removal mines not only ruin ecosystems but cause cardiovascular disease, cancer, birth defects and poor overall health.

Coal exports have nearly doubled since 2009 to 107 million tons last year, now accounting for almost 12 percent of U.S. production.<sup>2</sup> Three out of every four tons that are exported come from the Appalachian region,<sup>3</sup> and often this coal is produced by mountaintop removal mining—a devastating practice that has blanketed communities with soot, contaminated drinking water, and destroyed 2,000 miles of streams.

The Democratic staff of the House Natural Resources Committee obtained mine-specific export data that show how many of the region's surface mines, including mountaintop removal mines,

<sup>&</sup>lt;sup>1</sup> See Appendix A for data on countries importing U.S. coal.

<sup>&</sup>lt;sup>2</sup> Energy Information Administration, *U.S. Coal Exports by Country of Destination, Annual* and *U.S. Coal Exports*, (http://www.eia.gov/coal/data.cfm)

<sup>&</sup>lt;sup>3</sup> Energy Information Administration, *U.S. Domestic and Foreign Distribution of Coal by State of Origin*,2010, (http://www.eia.gov/coal/distribution/annual/pdf/o\_10foreign.pdf)

have accelerated exports in recent years as the marketplace moves to cheaper and cleaner alternatives to generate electricity. <sup>4</sup> Specifically, the data show:

- Ninety-seven mountaintop removal, steep slope and surface mines in West Virginia, Pennsylvania, Kentucky and Virginia exported American coal overseas in 2011, compared to 73 in 2008.
- Coal exports from surface mines in these four states have grown by 91 percent since 2009 to 13.2 million tons in 2011.
- Twenty-five of these mines exported more than half of their production in 2011. And six of these mines exported nine out of every 10 tons they produced last year.
- Overall, these 97 mines exported 27 percent of their production in 2011. In 2008, mines participating in the export trade sent 13 percent of their production overseas.

<sup>&</sup>lt;sup>4</sup> See Appendix C for mine-by-mine data from 2008 to 2011.

\_

The Energy Information Administration and the U.S. Mine Safety and Health Administration provided the data used for this analysis. The data only include coal sold directly from mines—about three-quarters of total U.S. exports in 2011—and does not include coal exported by third-party trading and brokerage firms such as XCoal that have become major players in U.S. export markets. That means exports from these mines are even higher than what's reported here.

Falling U.S. demand for coal is driving this spike in exports. U.S. power plants are shifting away from coal in favor of newly abundant supplies of natural gas and clean renewable energy. Six years ago, coal produced half of America's electricity. Today, it's down to a little over a third,

and still falling. Electricity from natural gas, meanwhile, has grown from 18 percent of U.S. power to 27 percent. And wind has gone from almost nothing to producing 3 percent of our power.

Appalachian mining companies are at a particular disadvantage in this transition because easily accessible reserves have been mined out after a century of intense production. Coal-fired utilities

also prefer lower sulfur coal from Wyoming's Powder River Basin. However, foreign countries like China, India, and Brazil, which have far weaker clean air standards than the United States, are still ready to buy.

One of Appalachia's largest mountaintop mining companies, Alpha Natural Resources, recently boasted to investors about selling 16.3 million tons of coal to buyers on five different continents, and having port access that would allow that figure to double.<sup>7</sup> Although the exported coal

collects data through Form 7000-2 (<a href="http://www.msha.gov/forms/7000-2.pdf">http://www.msha.gov/forms/7000-2.pdf</a>)

<sup>&</sup>lt;sup>5</sup> The Energy Information Administration (EIA) tabulates mine-specific export and production statistics using a combination self-reporting by mining companies and data from the U.S. Mine Safety and Health Administration (MSHA). Data for 2008 through 2010 has been finalized, while 2011 data is preliminary. The EIA collects export coal data through Form 7A (<a href="http://www.eia.gov/cneaf/coal/page/surveys/formeia7amine.pdf">http://www.eia.gov/cneaf/coal/page/surveys/formeia7amine.pdf</a>) and the MSHA

<sup>&</sup>lt;sup>6</sup> Based in Baltimore, XCoal sold more than 11 million tons of coal to overseas buyers in 2011, primarily from mines in West Virginia and Pennsylvania (<a href="http://www.xcoal.com/about.php/">http://www.xcoal.com/about.php/</a>)

<sup>&</sup>lt;sup>7</sup> See Appendix B for Alpha Natural Resources, *presentation to the Fourth Annual Raymond James Conference*, June 19. 2012 (<a href="http://files.shareholder.com/downloads/ALNR/1749576683x0x579683/c0d87b18-82b4-417e-a127-cf00e82f744c/ANR">http://files.shareholder.com/downloads/ALNR/1749576683x0x579683/c0d87b18-82b4-417e-a127-cf00e82f744c/ANR</a> RJ Presentation - FINAL 6-19-12.pdf)

#### Coal's Twilight

ne of Alpha Natural Resources 150-plus mines includes the aptly named Twilight mountaintop removal mine in Boone County, W.Va., shown on the cover of this report. In 2011 alone, this mine exported 442,000 tons of coal with an estimated value of \$40 million or more.

While Alpha profits from sales abroad, communities have been devastated here at home. After mining began in 1997, neighboring residents grew weary of breathing dust-laden air that is linked to cancer and heart disease. Many opted to sell their properties to the mine's owner, and communities were transformed into ghost towns, as this photo shows.

One former resident explained to the New York Times in 2011, "You could wash your car today, and tomorrow you could write your name on it in the dust... It was just unpleasant to live in that town. Period." Another resident was quoted as saying, "And this powder from the mountaintops was settling on everything, turning to brown paste in the rain. People no longer hung their whites on the clotheslines."

Alpha also recently agreed to settle a lawsuit brought by environmental groups for nearly \$4.5 million after a judge ruled that selenium levels in a nearby stream violated clean water permits. Before the ruling, the mine owner, a subsidiary of Alpha, persistently denied that its mining discharges were resulting in the toxic selenium levels.

accounted for just 15 percent of production, high prices on the international market meant that it made up 44 percent or \$3.1 billion of Alpha's revenue last year.

Nearly one out of every three tons sent overseas by Alpha came from 23 mountaintop removal, steep slope and surface mining operations in West Virginia, Kentucky and Virginia. All told, these 23 mines exported nearly 25 percent of their production, according to data reviewed by the committee's Democratic staff. (For more, see "Coal's Twilight.")

Smaller and lesser-known companies with mountaintop removal mines in Appalachia are also engaged in the lucrative export market. For example:

- Southern Coal Corporation's Strip #12 mine in Wise County, Va. exported more than 80 percent of the coal it produced last year.
- Mechel OAO, a Russian corporation, shipped nearly 83 percent of the coal produced from three mines in southern West Virginia.

- TECO Energy shipped more than 219,000 tons of coal from three mines in Kentucky, accounting for 16 percent of their production.
- Severstal, another Russian company, shipped 699,000 tons of coal from Mine No. 1, nearly half of the coal produced by the mine in Somerset County, Pa.

A growing body of research shows how mines like these not only ruin ecosystems<sup>8</sup> but cause cardiovascular disease, 9 cancer, 10 birth defects 11 and poor overall health. 12 The Department of

Research, Vol. 111, pages 838-846.

Interior's Office of Surface Mining (OSM) is now evaluating options for a new Stream Protection Rule that would protect Appalachian communities from the consequences of mountaintop removal mining.

As this rulemaking goes forward, we would do well to remember: While mountaintop removal mines are happy to sell to the highest foreign bidder, it's the Appalachian people who are paying the steepest price for this coal that America no longer uses.

Powering the Working World.

## Opportunities in the Atlantic Basin are promising

- As South African, Russian and Colombian coals increasingly serve coal demand in Asia, there is a meaningful opportunity for U.S. coal to fill the supply gap in the Atlantic Basin
- We expect European imports to increase
   150 million tonnes from
   2011 to 2020, and South American imports to grow by 50 million tonnes

### Appendix C

The following tables are compiled from data and mine ownership information that the Democratic staff of the Natural Resources Committee obtained from the Energy Information Administration (EIA) and the U.S. Mine Safety and Health Administration (MSHA). The production and export data from 2008, 2009 and 2010 has been finalized by EIA, while MSHA provided provisional data for 2011.

It is important to note that export information for each year only captures what was reported by individual mines. The two agencies use annual and quarterly forms to collect production and export data that is self-reported information by mine operators. The forms do not attempt to account for export tons sold by brokerage and trading firms, which made up nearly one-fourth of the U.S. export trade in 2011.

Committee staff has not attempted to correct or alter the data, only to present it in a more usable form for the public. As such, readers will find two data limitations: first, that approximately two dozen of the more than 300 mines do not match publically available data on MSHA's Data Retrieval System. Second, there are four mines that reported export figures higher than production for the given year. We cannot explain these obvious errors, as they were self-reported by mines to executive branch agencies.

The data has been sorted first by year, then alphabetically by state and finally by greatest percentage of production being exported. For each mine, information is provided on the current operator and controller as of July 13, 2012; surface production (in tons); exports (in tons); county in which the mine resides; and a mine identification number assigned by MSHA.
