- Whereas suicide is the only leading cause of death in the United States that has increased every year for the past decade;

- Whereas it is estimated that there are over 1,100,000 suicide attempts each year;
- Whereas over 90 percent of the people who die by suicide have a diagnosable and treatable mental health condition, although often that condition is not recognized or treated;
- Whereas according to the CDC, suicide results in an estimated \$44,600,000,000 in combined medical and work loss costs nationally;
- Whereas the stigma associated with mental health conditions and suicidality works against suicide prevention by discouraging persons at risk for suicide from seeking lifesaving help and further traumatizes survivors of suicide loss and people with lived experience of suicide; and
