INTRODUCTION

This is the twelfth edition of the **Private Pension Plan Bulletin**.

The universe for the **Bulletins** consists of all private pension plans for which a Form 5500 has been filed with the Department of Labor in accordance with Title I of the Employee Retirement Income Security Act of 1974 (ERISA). The universe for this particular Bulletin Is limited to plans that must file a Form 5500 with a reporting period ending no earlier than December 31, 1999 and no later than December 30, 2000. These plans may be defined benefit or defined contribution plans. They generally cover private wage and salary employees and are sponsored either by employers or jointly by employers and unions.

The 1999 Form 5500 was substantially revised from previous years. One major change has been the elimination of the 5500 C/R Form for plans with fewer than 100 participants. All plans now file the same basic Form 5500, although small plans are permitted to file a less detailed financial schedule (Schedule I) than large plans (Schedule H). Financial tables in the Bulletin that present data for all plans are based on the limited number of categories available on the Schedule I, while financial tables for plans with 100 or more participants show the more detailed line items provided on the Schedule H.

The revised form no longer includes information on the vested status of active participants, but some new items have been added that are useful in describing the changing nature of the private pension system. Additions to the Form include a code for identifying cash balance plans, and new distinction between defined contribution plans that permit participants to direct investment of only employee contributions and plans that permit participants to direct investment of both employee and employer contributions.

A new requirement for small plans is a classification of participants

into active, retired, and separated vested participants not yet in pay status. Prior year forms required small plans to report only the total number of participants. Tables in prior Bulletins showing the number of active, retired and separated vested participants relied on imputations to estimate participation within these categories for small plans. The data available on the new Form indicate that the imputations were overstating the number of active participants and consequently understating the number of retired and separated vested participants in small plans. Historical data on active participants in Tables E4, E8, E9, and E20 have therefore been revised based on the 1999 data.

Detailed asset lines such as those reporting corporate stock and corporate debt instruments show amounts held <u>directly</u> by pension plans. These lines do not include assets that pension plans hold <u>indirectly</u> through such investment arrangements as master trust investment accounts, common / collective trusts, pooled separate accounts, 103-12 investment entities, registered investment companies, and insurance company general accounts. Assets held through such investment arrangements have their own line items on Form 5500 Schedule H and in the tables of this publication. Similarly, line items for earnings on investments show earnings on investments held directly by pension plans and do not include earnings on investments held through the types of investment arrangements listed above.

Key findings from the 1999 filings are summarized in the **Highlights** on pages 3 and 4. The tabulations are organized into five sections. Section A contains summary data on plans, participants, assets, income and expenses. Section B contains more detailed data on plans and participants, showing distributions by different size measures, industry, type of plan, and method of funding. Section C contains balance sheets and income statements for the major types of pension plans. Section

D contains detailed data on defined contribution plans. Section E contains historical data from 1980 to 1999. This edition contains new information on cash balance plans and on participant direction of plan investments.

This publication was prepared by Helen Lawrence, David McCarthy, Daniel Beller, Steve Donahue, and Phyllis Fernandez of the Office of Policy and Research (Joseph Piacentini, Acting Director). HIGHLIGHTS FROM THE 1999 FORM 5500 REPORTS

Over the past 25 years, as the private pension system has shifted from defined benefit (DB) plans toward 401(k) type defined contribution (DC) plans, the financing of benefits has shifted from employers to participants. A milestone was reached in 1999 when total participant contributions for the first time exceeded total employer contributions to pension plans. In 1978, when legislation was enacted authorizing 401(k) type plans that allow employees to contribute on a pre-tax basis, 29 percent of contributions to DC plans, and only 11 percent of total contributions to all DB and DC pension plans were contributed by participants. In 1999, 60 percent of contributions to all plans were made by participants. Among 401(k) type plans, 70 percent of contributions came from participants.

Along with the increased burden on employees to contribute toward their retirement benefits has come increased control over the investment of their DC plan accounts. Almost 70 percent of 401(k) plan participants direct the investment of their entire account balances, with an additional 17 percent are able to direct the investment of a portion of the assets in their account.

While DB plans are still financed almost entirely by employers, there has been a movement in recent years to convert traditional DB plans to cash balance plans that contain many features similar to DC plans. A cash balance plan is a defined benefit plan that defines the benefit in terms that are more characteristic of a defined contribution plan. In 1999, there were about 1,300 cash balance plans. While making up only 3 percent of all DB plans, cash balance plans tend to be above average in size and covered 15 percent of all DB plan participants and held 20 percent of all DB plan assets.

Other findings from Form 5500 series reports for 1999 plan years are summarized below.

- The decades long shift from DB to DC plans continued in 1999, with the number of DB plans declining from 56,000 in 1998 to 50,000 in 1999 and the number of DC plans increasing from 674,000 to 683,000.
- There was little change in the number of active participants from 1998 to 1999, with the total active participant count increasing marginally from 72.8 million to 73.0 million. The number of active participants in DB plans decreased by about 1 percent to 22.6 million and the number of active participants in DC plans increased about 1 percent to 50.4 million.
- An estimated 14 percent of all private wage and salary workers are covered by both a DB and DC plan, an additional 7 percent are covered only by a single DB plan, and 29 percent have only DC plan coverage. The remainder are not covered by any plan.
- Most workers with dual pension coverage are concentrated in large manufacturing, communications, and utility industries firms. Total participants in plans covering workers in these industries are about evenly divided between DB and DC plans. (Unpublished data).
- Workers with coverage only under a DB plan are most likely to be enrolled in multiemployer Taft-Hartley plans that are administered by a joint board of trustees, half of whom are appointed by contributing employers and half by unions. These plans most commonly cover employees in small and

mid-sized unionized firms in construction and transportation industries. Only 11 percent of all pension plan participants are covered by multiemployer plans but these plans cover 65 percent of all participants employed in construction, and 28 percent of all participants employed in transportation. Among DB plan participants, 92 percent of those employed in construction, and 51 percent of those employed in transportation are in multiemployer plans. (Unpublished data).

- Most workers with DC plan coverage are employed in small firms, primarily in service industries where 73 percent of all participants are in DC plans, wholesale trade, with 75 percent of total participants covered by DC plans, and retail trade, with 69 percent of total participants participating in DC plans. (Unpublished data).
- The extraordinary growth rate of 401(k) type plans continued in 1999, with the number of plans increasing from 301,000 to 335,000 and the number of active participants increasing from 36.8 million to 38.6 million. 401(k) type plans now provide primary or supplemental plan coverage to over 70 percent of all pension covered workers.
- Pension plan assets increased 10% from \$4.0 trillion in 1998 to \$4.4 trillion in 1999. DB plan assets increased by 6% to \$2.1 trillion, while DC plan assets grew by 13% to almost \$2.4 trillion.
- Assets held in 401(k) type plans increased by 16% to \$1.8 trillion. Over three-quarters of all DC plan assets are now in 401(k) type plans.
- Contributions to pension plans increased by 7% in 1999 to \$215.8 billion. DB plan contributions decreased by 14% to \$30.0 billion, while DC plan contributions increased by 11%

to \$185.9 billion.

- Benefit payouts from DB plans have long exceeded contributions, and now benefits paid out by DC plans also exceed DC plan contributions. In 1999, pension plans disbursed \$314.5 billion in benefits to retirees, survivors, and terminating employees, including \$119.4 billion from DB plans and \$195.1 billion from DC plans.
- Overall, pensions disbursed \$98.7 billion more than they received in contributions. DB plans disbursed \$89.4 billion more than they collected in contributions, while DC plans disbursed \$9.2 billion more than they received in contributions. As a result, the increase in assets experienced by plans resulted solely from investment returns. Given that overall pension plan assets grew by about \$400 billion, this means that plans earned nearly \$500 billion in investment and other income.
- The aggregate rate of return for all plans with 100 or more participants in 1999 was 13.2 % (investment earnings and appreciation). DC plans achieved a 12.5 % rate of return during 1999 compared to 13.8 % for defined benefit plans.
- The aggregate rate of return was 13.6 % for single employer plans compared to 10.2% for multiemployer plans. Single employer plans tend to invest a higher percentage of their assets in stocks than multiemployer plans and generally achieve higher rates of return during years when the stock market performs well.
- The aggregate rate of return for 401(k) type plans in 1999 was 12.8 %.

^{1/} Excludes plans covering only one participant.

^{2/} Includes active, retired, and separated vested participants not yet in pay status. The number of participants also includes double counting of workers in more than one plan.

^{3/} Active participants include any workers currently in employment covered by a plan and who are earning or retaining credited service under a plan. Active participants also include nonvested former employees who have not yet incurred a break in service.

^{4/} Total asset amounts shown exclude funds held by life insurance companies under allocated group insurance contracts for payment of retirement benefits. These excluded funds make up roughly 10 to 15 percent of total pension fund assets.

^{5/} Includes both employer and employee contributions.

^{6/} Amounts shown include both benefits paid directly from trust funds and premium payments made by plans to insurance carriers.

Amounts exclude benefits paid directly by insurance carriers.

^{1/} Some workers are covered by more than one defined contribution plan.

SOURCES: Number of workers taken from Employment and Earnings, Bureau of Labor Statistics, U.S. Department of Labor. These numbers include both employed (full and part-time) and unemployed wage and salary workers. The number of workers participating in only a defined benefit plan, only a defined contribution plan, or both types of plans are estimates derived from Form 5500 filings for 1980-1999.

^{1/} The 1994 row, for example, represents all plan years that began in 1994. About 77 percent of these plan years began on January 1, 1994.

Note: Rates of return have been derived directly from tables C4-C11 and from similar published summary tables for prior years. The rate of return formula is the same as that described in Chapter 12 of the 1989 DOL volume entitled "Trends in Pensions," except that the return formula used here refines the treatment of receivables. The receivable line item called "income receivables," which first appeared on the 1988 form, is not deducted from total assets because such assets may produce investment income. The formula makes no adjustment for reporting periods other than one year, which are reported on approximately 3 percent of Form 5500 fillings. Because the Form 5500 does not provide information on the timing of cash flows during the year, a time weighted rate of return cannot be derived. The formula used in assumes that all cash flows occur in the middle of the plan's reporting period. The cash flow for which this assumption is most uncertain is contributions. The overall 1994 rate of return reported as 2.9 percent could be as low as 2.80 percent or as high as 2.98 percent depending on the assumption regarding the timing of contributions during the year. The overall 1995 rate of return reported as 20.8 percent could be as low as 20.15 percent or as high as 21.53 percent.

^{2/} The geometric mean is computed by adding one to the aggregate rate of return for each of the n years, taking the product of the sums, and taking the nth root of the product, and subtracting one.

^{3/} Standard deviation formula uses a denominator definition of n, not n-1.

^{1/} Average of beginning-of-year and end-of-year levels of all assets except contributions receivable and value of buildings and other property used in plan operations minus one-half of total return.

^{2/} Sum of interest, dividends, rents, and (for years 1985-87) royalties.

^{3/} The DFE category includes direct filing entities (common/collective trusts, master trusts, 103-12 investment entities, and pooled separate accounts) and funds invested through registered investment companies and insurance company general accounts.

^{4/} Sum of investment income, total appreciation, and total DFE income.

^{5/} Total return as a percentage of average investable assets. See note for previous table.

^{6/} Percentage increase in average investable assets (column 1) from previous year to current year.

^{7/} The geometric mean is computed by adding one to the rate for each of the n years, taking the product of the sums, taking the nth root of the product, and subtracting one. SOURCE: Form 5500 filings for 1985-1999
